Parker domnick hunter has a continuous policy of product development and although the Company reserves the right to change specification, it attempts to keep customers informed of any alterations. This publication is for general information only and customers are requested to contact our Process Filtration Sales Department for detailed information and advice on a product's suitability for specific applications. All products are sold subject to the company's Standard conditions of sale.

PROCLEAR GF Filters

- liquid filters
- glass microfibre

PROCLEAR GF filters are designed for reliable and economical removal of particulate and microorganisms from pharmaceutical fluids.

The non-fibre releasing glass microfibre filter media gives excellent dirt holding capacity and high flow rates for long service life and efficient and cost-effective filter system design.

PROCLEAR GF filters have low extractable levels making them ideal for general clarification and prefiltration duties in pharmaceutical processing.

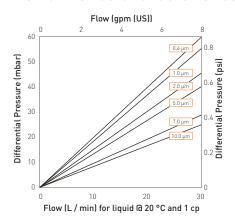

Features and Benefits

- Excellent dirt holding capacity
- Non-fibre releasing glass microfibre media
- Long service life for maximum throughput
- MURUS and DEMICAPs can be gamma-irradiated and autoclaved

Note: PROCLEAR and DEMICAP are registered trademarks of Parker Hannifin Corporation.

Recommended Operating Conditions

Filter Cartridges

Up to 70 °C (158 °F) continuous operating temperature and higher short-term temperatures during CIP to the following limits:

Temperature		Max. For	
°C	°F	(bar)	(psi)
20	68	5.0	72.5
40	104	4.0	58.0
60	140	3.0	43.5
80	176	2.0	29.0
90	194	1.5	21.7

MURUS Disposable Filter Capsules

Up to 25 °C (77 °F) @ 5.5 barg (79.7 psig) Up to 60 °C (140 °F) @ 2.8 barg (40.6 psig)

Parker Hannifin certify that this product complies with the current European Council Pressure Equipment Directive (PED) - Sound Engineering Practice (SEP). This product is intended for use with Group 1 & 2 Dangerous and Harmless Liquids and Group 2 Harmless Gases at the operating conditions stated in this document. The Pressure Equipment Directive mandates that category SEP product cannot bear the CE mark.

DEMICAP Filter Capsules

Up to 40 °C (104 °F) at line pressures up to 5.0 barg (72 psig).

Effective Filtration Area (EFA)

10" (250 mm):	0.56m^2	(6.0 ft ²)
K Size:	0.27m^2	(2.9 ft ²)
A Size:	0.20m^2	(2.2 ft ²)
B Size:	0.10m^2	(1.1 ft ²)
E Size:	0.05m^2	(0.6 ft^2)
Syringe ø50 mm:	$14.50cm^2$	(2.25 in ²

Sterilization

	Autoclave			-in-Place
	Cycles		Cycles (30 min.)	
Cartridges	10	130 °C (266 °F)	10	121 °C (249.8 °F)
MURUS	5	130 °C (266 °F)	-	=
DEMICAP	10	130 °C (266 °F)	-	=
Syringe	1	130 °C (266 °F)	-	-

PROCLEAR GF filter cartridges can be sanitized with hot water at up to 90 °C (194 °F) and are compatible with a wide range of chemicals.

For detailed operational procedures and advice on cleaning and sterilization, please contact the Technical Support Group through your usual Parker domnick hunter contact.

Biological Safety

Materials conform to the relevant requirements of 21CFR Part 177 and current USP Plastics Class VI - 121 °C and ISO10993 equivalents.

Quality Standards

Pharmaceutical grade products are manufactured in accordance with cGMP, 100% flushed with pharmaceutical grade purified water.

Gamma-Irradiation

PROCLEAR GF MURUS & DEMICAP disposable filters can be gamma-irradiated up to a maximum dosage of 40 kGy.

TOC / Conductivity

The filtrate quality from a 10" (250 mm) PROCLEAR GF conforms to the requirements of current USP <643> (TOC) and USP <645> (conductivity) within the first 200 ml flush of purified water.

Endotoxins

Aqueous extracts from the 10" (250 mm) PROCLEAR GF contain < 0.25 EU / ml when tested in accordance with the Limulus Amoebocyte Lysate test.

Non-Volatile Extractables (NVE)

Total NVEs extracted in the first 5 litre flush of purified water for a 10" (250 mm) cartridge are <10 mg.

Total NVEs extracted in the first 5 litre flush of purified water for an A size $7.9^{\circ\circ}$ (200 mm) DEMICAP capsule are <5 mg.

Pharmaceutical Validation

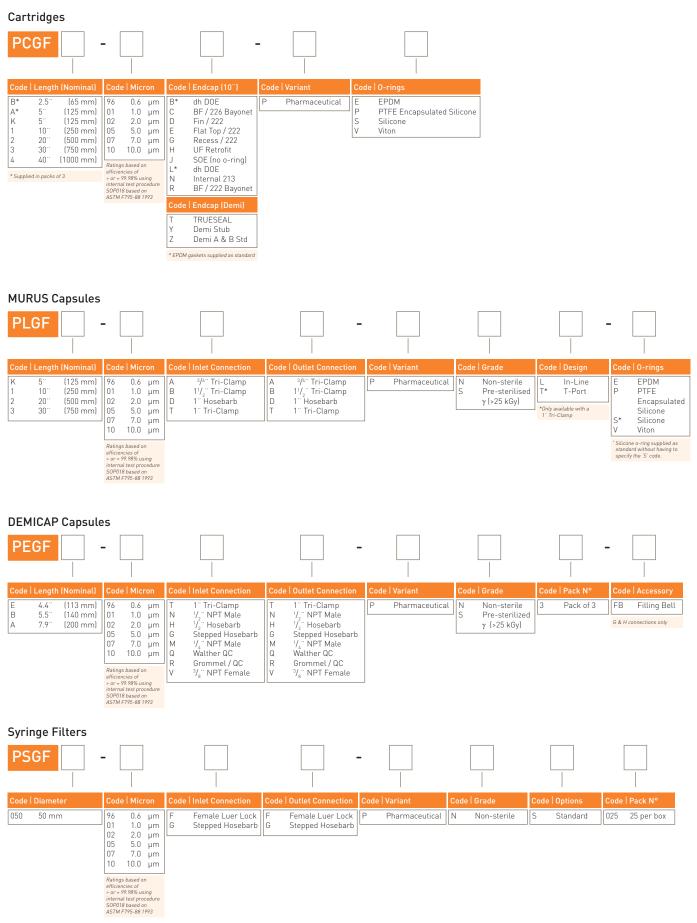

A full validation guide is available upon request from Laboratory Services Group (LSG).

Oxidizable Substances

PROCLEAR GF filter cartridges meet current USP and EP quality standards for sterile purified water for oxidizable substances following a <1 litre water flush.

Ordering Information

PROCLEAR GP Filters

- liquid filters
- glass microfibre / polypropylene

PROCLEAR GP filters combine glass microfibre and polypropylene media to provide maximum protection to downstream filter membranes and equipment.

Dirt holding capacity is maximized through use of a graded density media making PROCLEAR GP cartridge filters an economical and reliable choice for prefiltration.

PROCLEAR GP filters have low extractable levels and are suitable for bioburden reduction and fine prefiltration of pharmaceutical fluids and are ideal for high contamination applications.

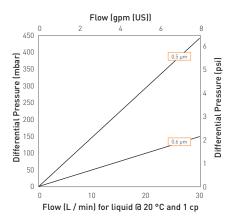

Features and Benefits

- Dual layer media or increased capacity and assurance
- Maximizes retention for protection of downstream membranes
- Ideal for difficult to filter solutions
- MURUS and DEMICAPs can be gamma-irradiated and autoclaved

Note: PROCLEAR and DEMICAP are registered trademarks of Parker Hannifin Coporation.

Ordering Information

PROCLEAR PP Filters

- liquid filters
- polypropylene

PROCLEAR PP filters are designed for a wide range of prefiltration duties within the production of pharmaceuticals and are particularly suited to applications where chemical compatibility is an issue.

The optimum pleat configuration and graded density polypropylene media used in PROCLEAR PP filters ensure the filters have the highest possible throughput to blockage resulting in long service life.

The PROCLEAR PP range of filters are fully supported by a comprehensive validation guide to simplify its specification into new and existing processes.

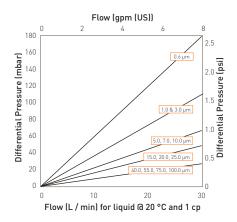

Features and Benefits

- Graded density polypropylene media for high capacity
- Extremely robust to withstand aggressive conditions
- All polypropylene construction
- MURUS and DEMICAPs can be gamma-irradiated and autoclaved

Note: PROCLEAR and DEMICAP are registered trademarks of Parker Hannifin Corporation.

Ordering Information

PROPOR BR Filters

- liquid filters
- polyethersulphone

PROPOR BR filters have been specifically designed for the fast and cost-effective bioburden reduction of pharmaceutical solutions.

PROPOR BR filters feature an integral meltblown prefilter layer to maximize dirt holding capacity whilst the polyethersulphone membrane guarantees a bioburden log reduction of greater than 5 giving excellent microbial protection. This makes PROPOR BR filters ideal for bioburden reduction of LVPs prior to terminal sterilization.

PROPOR BR filters are also ideally suited to prefiltration and bioburden reduction prior to sterilizing grade membrane filters. The robust construction of PROPOR BR filters guarantees consistent performance on multiple batches.

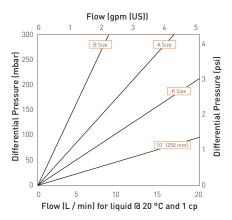

Features and Benefits

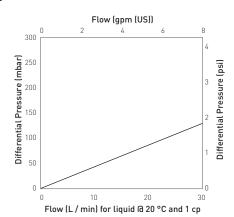

- Brevundimonas diminuta retention of LRV >5 for efficient bioburden reduction
- Additional prefilter layer gives excellent throughput to blockage
- Low binding for minimal product loss
- MURUS and DEMICAPs can be gamma-irradiated and autoclaved

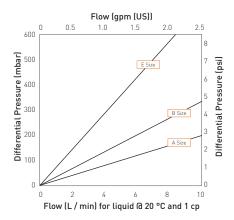

Note: PROPOR and DEMICAP are registered trademarks of Parker Hannifin Corporation.

Biological Safety

Materials conform to the relevant requirements of 21CFR Part 177 and current USP Plastics Class VI - 121 °C and ISO10993 equivalents.

Quality Standards

Pharmaceutical grade products are manufactured in accordance with cGMP, 100% flushed with pharmaceutical grade purified water and integrity tested prior to despatch. A sample of each lot is tested to demonstrate conformity to validated claims.

Gamma-Irradiation

PROPOR BR MURUS & DEMICAP disposable filters can be gamma-irradiated up to a maximum dosage of 40 kGy.

TOC / Conductivity

The filtrate quality from a 10" (250 mm) PROPOR BR conforms to the requirements of current USP <643> (TOC) and USP <645> (conductivity) within the first 200 ml flush of purified water.

Endotoxins

Aqueous extracts from the 10" (250 mm) PROPOR BR contain < 0.25 EU / ml when tested in accordance with the Limulus Amoebocyte Lysate test.

Non-Volatile Extractables (NVE)

Total NVEs extracted in the first 5 litre flush of purified water for a 10" (250 mm) cartridge are <10 mg.

Total NVEs extracted in the first 5 litre flush of purified water for an A size 7.9" (200 mm) DEMICAP capsule are <5 mg.

Pharmaceutical Validation

A full validation guide is available upon request from Laboratory Services Group (LSG).

Oxidizable Substances

PROPOR BR filter cartridges meet current USP and EP quality standards for sterile purified water for oxidizable substances following a <1 litre water flush.

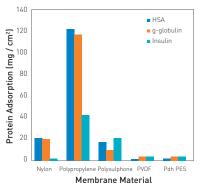

Integrity Test Data

All filters are integrity testable to the following limits when wet with water and using air as the test gas.

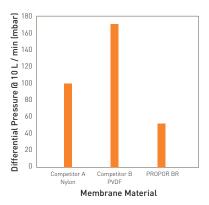

Micron Rating		0.2
Filter Cartridges /	MURUS / [DEMICAP
Min. Bubble Point	(barg)	2.5
	(psig)	36.0
Filter Cartridges /	MURUS / [DEMICAP / Syringe Filters
Diffusional Flow	(barg)	1.7
Test Pressure	(psig)	24.7
Filter Cartridges /	MURUS / [DEMICAP / Syringe Filters
Max. Diffusional Flo	w (10")	16.0
(ml / min)	(K)	7.4
	(A)	6.0
	(B)	2.9
	(E)	1.2

Retention Characteristics

PROPOR BR filter cartridges are validated to an LRV > 5 by bacterial challenge testing with *Brevundimonas diminuta* to current ASTM F838 methodology (10⁷ organisms / cm² EFA minimum) with typical in-house challenge levels being 10¹¹ organisms per 10" (250 mm) module.

DEMICAP Capsules

Syringe Filters

PROPOR HC Filters

- liquid filters
- polyethersulphone

PROPOR HC sterilizing grade filters have been specifically designed for the effective and economical processing of difficult to filter solutions.

The optimized PROPOR HC PES membrane configuration features a highly asymmetric membrane prefilter layer, which significantly extends throughput and prevents the problems associated with premature filter blockage with complex solutions.

PROPOR HC filters are high capacity and fast flowing. The PES membrane is inherently low binding, which minimizes product loss due to protein or preservative adsorption. The filters have low extractable levels and broad chemical compatibility.

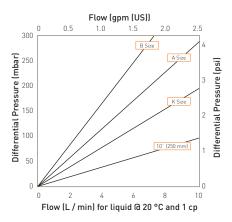

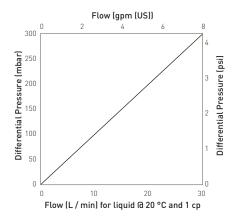

- Optimized membrane configuration allows up to ten times the throughput compared to single layer membrane products
- Integral prefilter layer can condense filter trains for greater processing economy
- Incorporates a fully validated and integrity testable 0.2 micron membrane for assurance of sterility
- Low binding for minimal product loss

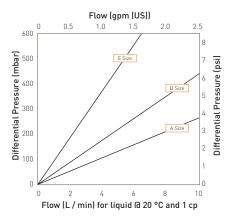

Note: PROPOR and DEMICAP are registered trademarks of Parker Hannifin Corporation.

Up to 70 °C (158 °F) continuous operating temperature and higher short-term temperatures during CIP to the following limits:

Temp °C	erature °F	Max. Forward dP (bar) (psi)		
20	68	5.0	72.5	
40	104	4.0	58.0	
60	140	3.0	43.5	
80	176	2.0	29.0	
90	194	1.7	24.6	

MURUS Disposable Filter Capsules

Up to 25 °C (77 °F) @ 5.5 barg (79.7 psig) Up to 60 °C (140 °F) @ 2.8 barg (40.6 psig)

Parker Hannifin certify that this product complies with the current European Council Pressure Equipment Directive (PED) - Sound Engineering Practice (SEP). This product is intended for use with Group 1 & 2 Dangerous and Harmless Liquids and Group 2 Harmless Gases at the operating conditions stated in this document. The Pressure Equipment Directive mandates that category SEP product cannot bear the CE mark.

DEMICAP Filter Capsules

Up to 40 °C (104 °F) at line pressures up to 5.0 barg (72 psig).

Effective Filtration Area (EFA)

10" (250 mm):	0.55m^2	(5.92 ft ²)
K Size:	0.26 m^2	(2.79 ft ²)
A Size:	0.20m^2	(2.15 ft ²)
B Size:	0.10m^2	(1.07 ft ²)
E Size:	0.05m^2	(0.53 ft ²)

Syringe	1	130 °C (266 °F)	-	-

PROPOR HC filter cartridges can be sanitized with hot water at up to 90 °C (194 °F) and are compatible with a wide range of chemicals.

For detailed operational procedures and advice on cleaning and sterilization, please contact the Technical Support Group through your usual Parker domnick hunter contact.

Biological Safety

Materials conform to the relevant requirements of 21CFR Part 177 and current USP Plastics Class VI - 121 °C and ISO10993 equivalents.

Quality Standards

Pharmaceutical grade products are manufactured in accordance with cGMP, 100% flushed with pharmaceutical grade purified water and integrity tested prior to despatch. A sample of each lot is tested to demonstrate conformity to validated claims.

Gamma-Irradiation

PROPOR HC MURUS & DEMICAP disposable filters can be gamma-irradiated up to a maximum dosage of 40 kGy.

TOC / Conductivity

The filtrate quality from a 10" (250 mm) PROPOR HC conforms to the requirements of current USP <643> (TOC) and USP <645> (conductivity) within the first 200 ml flush of purified water.

Endotoxins

Aqueous extracts from the 10" (250 mm) PROPOR HC contain < 0.25 EU / ml when tested in accordance with the Limulus Amoebocyte Lysate test.

Non-Volatile Extractables (NVE)

Total NVEs extracted in the first 5 litre flush of purified water for a 10" (250 mm) cartridge are <10 mg.

Total NVEs extracted in the first 5 litre flush of purified water for an A size 7.9" (200 mm) DEMICAP capsule are <5 mg.

Pharmaceutical Validation

A full validation guide is available upon request from Laboratory Services Group (LSG).

Oxidizable Substances

PROPOR HC filter cartridges meet current USP and EP quality standards for sterile purified water for oxidizable substances following a <1 litre water flush.

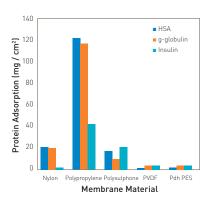

Integrity Test Data

All filters are integrity testable to the following limits when wet with water and using air as the test gas.

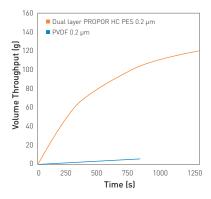

Micron Rating		0.2
Filter Cartridges /	MURUS / D	EMICAP / Syringe Filters

Syringe Filters

PROPOR MR Filters

- liquid filters
- polyethersulphone

PROPOR MR filters have been specifically designed for fast, effective and economical removal of mycoplasma from cell culture media in the biopharmaceutical industry.

Incorporating a highly retentive 0.1 micron rated PES membrane, PROPOR MR is validated against the industry standard *Brevundimonas diminuta* as well as *Acholeplasma laidlawii*, a common mycoplasma species found in contaminated cell cultures.

An asymmetric integral membrane prefilter layer provides PROPOR MR with the optimal membrane configuration for maximum capacity and flow rate. Quick processing times minimize the risk of contamination while still offering maximum protection from mycoplasma.

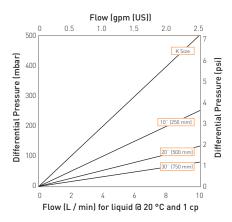

Features and Benefits

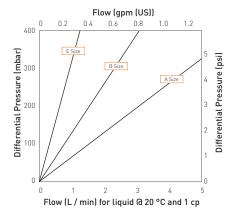

- Fully validated and integrity testable for assurance of sterility
- A typical LRV of >10 for Acholeplasma laidlawii for effective mycoplasma control
- Integral prefilter layer increases throughputs for reduction of filter trains
- Exceptional flow rates for quick processing of cell culture media

Syringe Filters

PROPOR SG Filters

- liquid filters
- polyethersulphone

PROPOR SG sterilizing grade filters feature a microbially retentive polyethersulphone membrane for fast, reliable and cost-effective sterile filtration of pharmaceutical fluids.

The asymmetric pore structure and high voids volume of the PROPOR SG membrane allow high throughputs and exceptionally high flow rates compared with competitive PES and alternative membranes. Low protein and preservative binding properties minimize product loss due to adsorption.

PROPOR SG filters are optimized for pharmaceutical processing. They have low extractable levels and broad chemical compatibility across the full pH range including organic solvents.

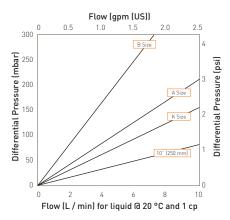

Features and Benefits

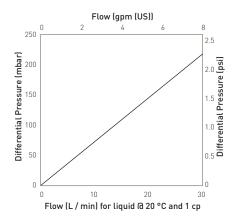

- Up to 3.5 times higher flow rates than competitive sterilizing grade filters
- Fully validated and integrity testable membrane for assurance of sterility
- Low binding for minimal product loss
- MURUS and DEMICAPs can be gamma-irradiated and autoclaved

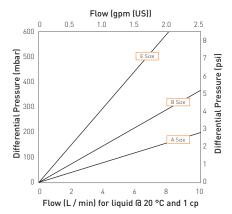

Note: PROPOR and DEMICAP are registered trademarks of Parker Hannifin Corporation.

Syringe Filters

PROPOR TFF autoclaveable hollow fibre filters provide maximum cross flow performance with minimal preparation and installation time while also allowing the flexibility of autoclave sterilization.

High flux, low fouling and low binding modified PES hollow fibre membrane technology offers consistent and fully scaleable performance in a broad range of applications.

PROPOR TFF autoclaveable filters are supplied glycerin free ready to use without the need for extensive pre-flushing.

Extremely robust, high performance advanced proprietary membrane chemistry offers long module lifetime with sustained high flux and productivity over prolonged periods of usage, such as in perfusion applications.

Features and Benefits

- Ready to use cross flow filtration - no pre-rinse required
- Up to 80x reduction in extractables compared to glycerin conditioned membranes
- High flux, low fouling modified PES membrane for exceptional performance
- No cleaning required
- Self-contained hollow fibre filters - no hardware, no installation
- 100% integrity tested
- Able to be sterilized by autoclaving

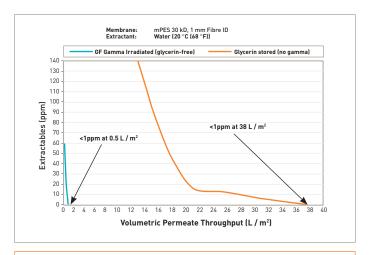

PROPOR TFF autoclaveable

- tangential flow filtration
- modified polyethersulphone hollow fibre cartridges

Materials of Construction

Membrane: Modified glycerin free polyethersulphone (PES)

■ Internal Screens: Polypropylene

Encapsulant: FDA compliant polyurethane

■ Housing: White polysulphone

Sterilization

All PROPOR TFF autoclaveable hollow fibre filters are supplied pre-irradiated to prevent the requirement for use of an antimicrobial agent post-manufacture.

Filters are designed to be sterilized through additional autoclave cycles, and are validated to withstand up to 5 x 30 minute cycles at a maximum temperature of 121 °C (249.8 °F).

Compliance / Biological Safety

All materials of construction meet USP Class VI and Physiochemical Test For Plastics standards, and are compliant with FDA 21CFR parts 175 – 177 as relevant to the appropriate material type.

Quality Standards

All materials used in the construction of Parker domnick hunter hollow fibre filters are 100% lot traceable.

All membrane lots are tested to ensure conformity with retention, permeability and water flux specifications. All finished filters are tested for clean water flux, and cartridge / fibre integrity post manufacture.

Shelf-Life

Under recommended conditions (refer to product validation guide) unused PROPOR TFF filters can be stored for a period of up to 18 months following the date of manufacture without affecting product performance.

Parker Hannifin certify that this product complies with the current European Council Pressure Equipment Directive (PED) - Sound Engineering Practice (SEP). This product is intended for use with Group 1 & 2 Dangerous and Harmless Liquids and Group 2 Harmless Gases at the operating conditions stated in this document. The Pressure Equipment Directive mandates that category SEP product cannot bear the CE mark

Ordering Information

PROPOR TFF reusable hollow fibre filters provide maximum process performance and high product yield through the use of advanced low fouling modified PES membrane technology, while also allowing for more efficient post-use module cleaning.

High flux, low fouling and low binding modified PES hollow fibre membrane technology offers consistent and fully scaleable performance in a broad range of applications.

PROPOR TFF reusable filters are also completely caustic stable, allowing the filter to be repeatedly cleaned, sanitized and stored throughout the duration of a long service life without risk to product integrity.

Features and Benefits

- High flux, low fouling modified PES membrane for exceptional performance
- Self-contained hollow fibre filters - no hardware, no installation
- 100% integrity tested
- Robust, caustic-stable materials of construction allow repeated chemical cleaning, sanitization and storage cycles

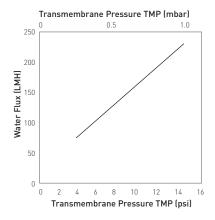

PROPOR TFF reusable

Specifications

Materials of Construction

■ Membrane: Modified

polyethersulphone (PES)

Internal Screens: PolypropyleneEncapsulant: FDA compliant epoxy

Housing: White polysulphone

Sanitization and Storage

All PROPOR TFF reusable hollow fibre filters are supplied containing sodium azide preservative solution. Together with the glycerin humectant contained within the membrane, this solution should be flushed from the filter prior to use.

The filters can be cleaned and sanitized, using sodium hydroxide solution (NaOH) at concentrations of up to 0.5M, and stored in 0.1M NaOH solution. Please refer to the product validation guide and standard operating procedure for specific guidance.

Compliance / Biological Safety

All materials of construction meet USP Class VI and Physiochemical Test For Plastics standards, and are compliant with FDA 21CFR parts 175 – 177 as relevant to the appropriate material type.

Quality Standards

All materials used in the construction of Parker domnick hunter hollow fibre filters are 100% lot traceable.

All membrane lots are tested to ensure conformity with retention, permeability and water-flux specifications. All finished filters are tested for clean water flux, and cartridge / fibre integrity post manufacture.

Shelf-Life

Under recommended conditions (refer to product validation guide) unused PROPOR TFF filters can be stored for a period of up to 24 months following the date of manufacture without affecting product performance.

Parker Hannifin certify that this product complies with the current European Council Pressure Equipment Directive (PED) - Sound Engineering Practice (SEP). This product is intended for use with Group 1 & 2 Dangerous and Harmless Liquids and Group 2 Harmless Gases at the operating conditions stated in this document. The Pressure Equipment Directive mandates that category SEP product cannot bear the CE mark.

Ordering Information

PROPOR TFF single-use hollow fibre filters provide maximum cross-flow performance with minimal preparation and installation time.

High flux, low fouling and low binding modified PES hollow fibre membrane technology offers consistent and fully scaleable performance in a broad range of applications.

Applying single-use technologies to tangential flow filtration reduces the risk of batch-to-batch contaminations, increases operational flexibility and decreases time to market through the elimination of cleaning, validation and storage protocols.

PROPOR TFF single-use filters are supplied glycerin-free, ready to use without the need for extensive pre-flushing. Set up time can be reduced even further when provided pre-integrated and irradiated as part of a Parker domnick hunter manifold.

Features and Benefits

- Ready to use cross flow filtration - no pre-rinse required
- Up to 80x reduction in extractables compared to glycerin conditioned membranes
- High flux, low fouling modified PES membrane for exceptional performance
- Plug-and-play connect, use and discard
- · No cleaning required
- Self-contained hollow fibre filters - no hardware, no installation
- 100% integrity tested
- Sterilizable by gamma-irradiation

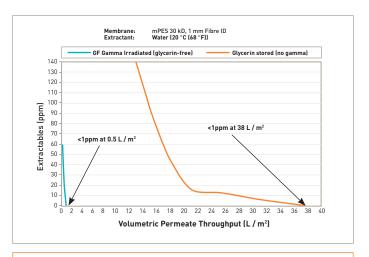

PROPOR TFF single-use

- · tangential flow filtration
- modified polyethersulphone hollow fibre cartridges

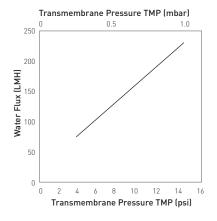

Note: PROPOR is a registered trademark of Parker Hannifin Corporation.

PROPOR TFF single-use filters offer minimal extractable levels with no water flush

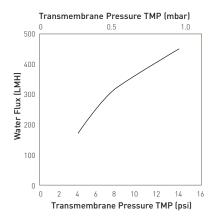

Extractable flush analysis: glycerin-free vs glycerin stored

Specifications

Materials of Construction

Membrane: Modified glycerin-free polyethersulphone (PES)
 Internal Screens: Polypropylene

Encapsulant: FDA compliant epoxy
 Housing: White polysulphone

Sterilization

All PROPOR TFF single-use hollow fibre filters are supplied pre-irradiated to prevent the requirement for use of an antimicrobial agent post-manufacture.

Filters are validated to withstand secondary irradiation dosage at 25 to 40kGy to allow sterilization as part of a larger system.

Compliance / Biological Safety

All materials of construction meet USP Class VI and Physiochemical Test for Plastics standards, and are compliant with FDA 21CFR parts 175 – 177 as relevant to the appropriate material type.

Quality Standards

All materials used in the construction of Parker domnick hunter hollow fibre filters are 100% lot traceable.

All membrane lots are tested to ensure conformity with retention, permeability and water-flux specifications. All finished filters are tested for clean water flux, and cartridge / fibre integrity post manufacture.

Ordering Information

domnick -Parker hunter

The only pre-calibrated, single-use conductivity sensors with a gamma-stable memory device that stores data of all calibration, and sensor specific information.

The SciLog® SciCon® combines temperature sensing capabilities with conductivity sensing capabilities in a compact, disposable, single-use package at a low price point. Each sensor is pre-programmed and barcoded with a unique ID for easy traceability and data documentation when combined with the SciLog® SciDoc software. Factory calibration data is also stored on each sensor's chip for out-of-box, plug and play use. The SciCon® comes in 5 different sizes to fit a variety of tubing sizes: Luer, $\frac{3}{8}$ barb, $\frac{1}{2}$ barb, ³/₄." Tri-Clover and 1" Tri-Clover Ladish.

Features and Benefits

- Pre-calibrated
- NIST-traceable

HarvestClear® Filtration System

- intelligent bioprocessing system
- automated bioreactor clarification

The HarvestClear® Filtration System is a complete solution for cell culture harvest that provides fast, automated clarification of bioreactor outputs up to 20L. The system integrates SciLog fluid handling and pressure sensing expertise with the filtration excellence of Parker domnick hunter.

Simply connect your bioreactor to the sterile, ready-to-use filtration manifold, comprised of Parker domick hunter filters and SciPres® pressure sensors. Filtration is controlled by the FilterTec™ software-driven laboratory-scale normal flow filtration (NFF) system, teamed with a SciPres® pressure monitor. Three single-use filtration manifold sizes are available to clarify high cell density bioreactor outputs from 1L to 20L. The system can be connected to an optional WeighStation™ holding a single-use sterile bioprocess container to provide filtrate quantitation and precision flow metering.

Features and Benefits

- Walk-away automation reduces hands-on time, and optimizes filtration outputs.
- In-line SciPres® pressure sensors coupled with FilterTec™ controller ensure operator safety.
- Fully assembled, sterile filtration manifolds are ready-to-use with pre-flushed filters.
- Three filter manifold sizes to handle high density cell concentrations from 1-20L.
- Sterile single-use bioprocess containers are also available.

 $Note: Harvest Clear @, Filter Tec^{TM} \ and \ SciPres @ \ are \ trademarks \ of \ Parker \ Hannifin \ Corporation.$

Single-Use Filtration Manifolds

The three sizes of single-use, sterile filtration manifolds are gamma irradiated and are comprised of the pre-flushed filters indicated, with Luer connectors, tubing and SciPres® pressure sensors. Sterile single-use bioprocess containers to collect the filtrate are available separately.

Bioreactor Output	PROCLEAR GF (Prefiltration)	PROPOR HC (Sterilizing-Grade)
1-5L	10	10
5-10L	20"	10
10-20L	30	10"

Walk-Away Automation

The FilterTec™ controller offers four operational modes, constant rate, constant pressure, R/P Stat and manual modes. Using input from the in-line SciPres® pressure sensors, the FilterTec™ controller automatically adjusts and documents prefilter back pressure, as well as permeate flow rate to optimize filtration speed and maximize filter throughput. User selectable alarms allow automatic stopping once a given filter back pressure or minimum filtrate flow rate is reached. The patented R/P Stat Method has been proven to increase filter throughput by up to 30%. The automatic documentation and alarm /pump stop settings allow the user to focus on other tasks while the system is running. Integration of a balance with the system enables gravimetric end point control.

Increased Safety

The automated HarvestClear® Filtration System also increases operator safety. The FilterTec™ controller can be programmed to shut down at a maximum pressure, ensuring no damage to the filters or manifold, which could otherwise lead to operator injury, or potent proteins being discharged into the working environment.

R/P Stat Mode

The FilterTec™ controller incorporates the patented R/P Stat Method, an innovation which offers significant improvements in filter output. The R/P Stat Method enables constant pressure or constant rate NFF via a pump / monitor PID loop including disposable inline pressure sensors. This is done by selecting three simple process variables including initial flow rate, maximum inlet pressure and minimum flow rate. By using the R/P Stat Method, the FilterTec™ controller operates at constant rate until it reaches the maximum pressure, then the controller switches to constant pressure and dynamically adjusts the flow rate as the membrane begins to foul. This allows additional product to pass through the filter and is shown graphically in Figure 1.

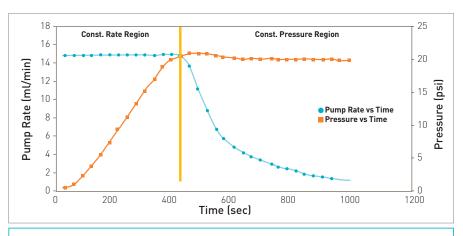

Figure 1 - Dead-end filtration by R/P Stat Method

Specifications

HarvestClear® Filtration System Components

The complete HarvestClear® Filtration System solution consists of a programmable fluid handling system and a single-use filtration manifold. The system and manifolds are ordered separately.

HarvestClear™ Fluid Handling System

- FilterTec[™] controller with a 600RPM motor and 1081 pump head
- SciPres® pressure sensor monitor
- Communication cables
- SciDoc data acquisition software

Filter Manifold Components

- 1 x PROCLEAR GF 5 µm glass-fibre prefilter
- 1 x PROPOR HC 0.2 µm polyethersulphone high capacity sterilizing-grade membrane filter
- 2 x SciPres® pre-calibrated pressure sensors (1" Tri-Clover)
- 1 x set of platinum-cured #17 silicone tubing (¹/₄ · I.D, ³/₈ · O.D.)
- Luer connectors at each end, with sealing cups; bagged and zip-tied

FilterTec™ Specifications

Dimension / Weight:
 Width: 5.75" (146 mm)
 Height: 8.5" (2126 mm)

Depth: 11" (279 mm): 14 lbs (6.4 Kg)

- Enclosure & Rating:
 16 Ga, aluminium baked epoxy blue 4-40dC,
 0-100% Humidity
- Pressure Sensors:
 - Accommodates up to three (3) disposable pressure sensors. The calibrated pressure range is 0 60 psi. Any point within this range can be recalibrated using an external pressure reference source.
- Power:
 115 / 220-240 VAC, 60 / 50 Hz, 75 Watts, double fused: T1AL 250V (CE: IR35A 250VAC)
- Motor / Encoder: 600 RPM, 30 VDC, 3.8A, 100 ppr
- I/O Ports:
 Male DB9 scale connections (RS-232), female DB9 printer or PC connection (RS-232), external IO DB37 connector, 1 TTL input, 4 TTL output, 3 4-20mA
- Operational Mode:
 Constant rate, constant pressure,
 R/P Stat and manual mode
- Pump Head:
 1081 flow rate (ml/min): 0.03 1515
 Pressure: 25 psi continuous, 45 psi max.

Accessories

- Single-use bioprocess containers
- WeighStation™

The SciLog® ChemTec™ is a high precision metering system that provides application specific automation for chemical and biological application.

The precision metering is achieved by using high resolution optical motor encoders for volumetric applications as well as connection to a balance for gravimetric applications. Applications range from programmable dispensing strategies, reactor biomass and pH maintenance, analog control, as well as solution weight maintenance or diafiltration control.

The automatic documentation and alarm / pump stop settings allow the user to focus on other tasks while the system is running. Programmable end points ensure the system ceases operation when run stops command or application target endpoints are reached. The ChemTec $^{\text{TM}}$ is available with peristaltic, piston and magnetic gear models. When sold with SciDoc software or a printer, documentation capabilities include 10 real-time filtration parameters.

Features and Benefits

- Volumetric or gravimetric operation
- Compatible with most 3rd party balances
- Real-time data collection
- Dispense accuracy <0.5% error
- Intuitive application interface
- Safe, walk-away systems operation

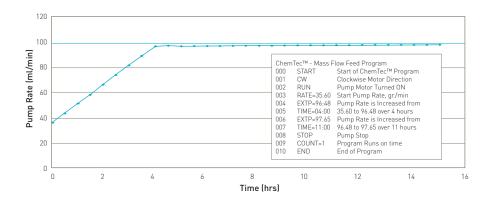

SciLog[®] ChemTec™

- intelligent bioprocessing system
- metering system

Note: SciLog@ & ChemTecTM are trademarks of Parker Hannifin Corporation.

Applications

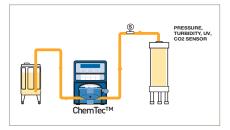

Pump Rate (ml/min) vs. Time (hours)

Metering

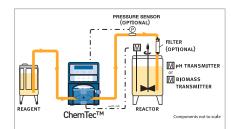

The ChemTec™ provides user-definable feed either by volume or by weight. Volumes are calculated by a high resolution optical encoder or if connected to an electronic scale, the ChemTec™ becomes a self-calibrating metering system. The feed rates are executed on a user-programmable time schedule.

Linear and exponential feed gradients are readily implemented from the ChemTecTM front panel or programs can be prepared, stored and transferred from a PC.

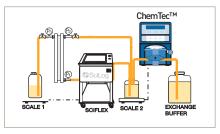

Analog Monitoring Mode

The ChemTec[™] accepts signals from controllers or sensors such as turbidity or UV monitors. These transmitters provide a 4-20mA signal that is proportional to the parameters the sensor is monitoring. In the Analog mode, the ChemTec[™] 0-100% pump output is directly proportional to the signal received from the 4-20mA device.

pH Control

The ChemTec™ automates pH control as well as titrations in larger-volume reactor applications. In the pH control mode, the ChemTec™ is connected to a pH transmitter with a 4-20mA output. The ChemTec™ provides user-definable pH set-point, which it will maintain by adding small increments of reagent. The pH set-point can be maintained indefinitely within 0.10 pH unit, i.e. the smallest selectable pH bandwidth. For titration applications, the user-definable pH set-point represents the titration endpoint, e.g. pH set-point = pH 7.00 for a simple acid / base neutralization reaction.

Diafiltration or Weight Maintenance

The ChemTec™ can monitor and maintain the weight of a solution stored on a balance. An example would be when performing a tangential flow filtration process, a common step involves diafiltration ("washing") of protein solutions. The ChemTec™ is programmed to maintain a constant weight by automatically adding buffer to the filtration reservoir to make up for the volume removed during filtration. The ChemTec™ adds exchange buffer until a user-defined volume limit has been attained. The ChemTec™ also allows stop/start control over the diafiltration system.

SciLog® FilterTec™/FilterTec™ Plus

- intelligent bioprocessing system
- dead-end single / multi-filtration system

The SciLog® FilterTec™ is an automated laboratory scale normal flow filtration (NFF) system that monitors, adjusts and documents filter back pressure and filtrate.

The result is a system that can optimize filtration parameters, maximize filter throughput and can also be used as a tool to evaluate / compare different filters by calculating Vmax. The system also offers the patented R/P Stat (rate / pressure) method, which has been proven to increase filter throughput up to 30%.

The automatic documentation and alarm / pump stop settings allow the user to focus on other tasks while the system is running. Programmable end points ensure the system stops operating when a given back pressure, filtrate rate or total filtrate limit has been reached. When sold with SciDoc software, documentation capabilities include collection of 15 real-time filtration parameters. The FilterTec™ is also an integral component in the HarvestClear® Filtration System, a complete solution for clarifying bioreactor outputs up to 20L.

Features and Benefits

- Safe, walk-away system operation
- Filterability studies and Vmax determination
- Real-time data collection of 15 filtration parameters
- Increased NFF filter efficiency up to 30%
- 3 pressures sensor connections for serial or parallel filter trains
- Compatible with all filters
- Optional scale enables gravimetric control

 $Note: SciLog^{@}, HarvestClear^{@} \ \& \ Filter Tec^{TM} \ are \ trademarks \ of \ Parker \ Hannifin \ Corporation.$

FilterTec™ Plus

Triple your NFF productivity with the FilterTec™ Plus and enjoy the same features of the SciLog FilterTec™ for filterability studies, filter size determination and filter scale-up. The FilterTec™ Plus has expanded upon the capabilities of the FilterTec™ to communicate with up to three electronic balances and control three pump heads simultaneously. This product allows for testing of three identical NFF filters at the same rates or three different filters at the same pressure. Parallel processing of a solution through three filters provides statistical verification of filter capacity. The FilterTec™ Plus is compatible with all manufacturers' filters.

SciLog® FilterTec™ / FilterTec™ Plus

Applications

Normal Flow Filtration (NFF)

The FilterTec™ uses a pressure sensor and scale feedback to perform normal flow operations by constant rate or constant pressure. The end point controls ensure the system shuts off when a user defined maximum filter pressure, minimum filtrate rate or maximum filtrate limit is reached.

Normal Flow Filtration (NFF) - Optimized

The FilterTec™ achieves optimized normal flow operations by utilizing the patented R/P Stat Method. This automated procedure maintains a selected pump rate until a userdefined upper pressure limit has been attained as a result of filter plugging. The system automatically switches from a constant rate to a constant pressure fluid delivery (see Fig. 1). The pump continuously reduces the flow rate to maintain the pressure across the filter until a user-defined minimum filtrate rate is attained. This method allows full utilization of the existing filter capacity and is accompanied by a significant increase in total filter throughput upwards of 30% compared to constant pressure or constant flow throughput data.

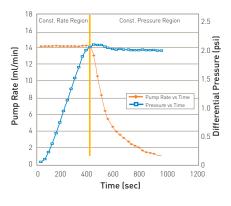

Filterability Studies

The FilterTec™ is capable of simultaneously monitoring three pressure points. This capability is particularly useful in monitoring the pressure differentials of multiple filters in a serial or a parallel filter train. Excessive pressure build-up across a filtration stage element typically indicates the need for a larger porosity and/or a larger area filter element. The FilterTec™s R/P programmable mode allows you to modify the pump rate and/or pressure over a selected time interval, in a stair-step (Step) or ramped (Scan) manner, (see Fig. 2) until the user defined filtrate weight has been attained.

Vmax Determination

When used with an electronic scale, the FilterTec™ collects and documents the filtrate weight in the constant pressure, constant rate or R/P Stat Method. The parameter T / W (Time / Filtrate Weight) is plotted against time. The inverse of the resulting slope represents Vmax. The FilterTec™ reports the instantaneous Vmax from the slope of the neighboring data points. (see Fig. 3).

SciLog[®] LabTec™

- intelligent bioprocessing system
- dispensing system

The SciLog[®] LabTec[™] is an automated laboratory scale dispensing system by volume, weight or weight ratio.

The LabTec™ automates, optimizes and documents repetitive liquid dispensing with or without in-line filter sterilization. The LabTec™ models are ideally suited for dispensing sterile solutions in media kitchens and microbiology laboratories. Also widely used in small production runs to fill your final product into vials, bottles, bags, and containers.

The automatic documentation and alarm / pump stop settings allow the user to focus on other tasks while the system is running. Remote control and programmable end points ensure the system starts and stops operating when a given dispense is complete or an interlock condition occurs. When sold with SciDoc software or a printer, documentation capabilities include 7 real-time parameters.

Features and Benefits

- Rapid, high prevision dispensing by volume, weight or weight ratio
- Self priming
- Reversible flow
- Remote activation
- Accuracy +/- 0.5% by volume

- Accuracy +/- 0.3% by weight
- Pressure alarm alerts when in-line filter needs to be replaced
- PC or printer documentation of dispensing

 $Note: SciLog @~\&~ Lab Tec^{TM}~ are~ registered~ trademarks~ of~ Parker~ Hannifin~ Corporation.$

Applications

Weighing, Dilution and Sterilization

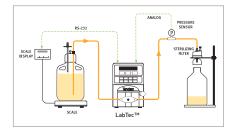

The LabTec™ significantly increases the productivity of any microbiology laboratory. The dispensing system automates weighing and diluting of food samples, in preparation for bacteriological analysis Only an approximate sample size is needed. The LabTec™ dispenser calculates and rapidly dispenses the media required to achieve a user-selected diluent factor. See Table 1. Costly and timeconsuming autoclaving of media is avoided with in-line filter sterilization of diluents using a filter capsule. A disposable pressure sensor monitors filter backpressure and provides an alarm signal when a failing sterilizing filter (high backpressure) needs to be replaced. An optional printer or PC hook-up automatically documents all sample and diluent weights. The LabTec™ dispenser improves the speed, precision and accuracy of the entire sample preparation process by automating the weighing, dilution and documentation process

Precision Batch Dispensing

The LabTec™ Smart Dispensing System is capable of high speed, high precision batch dispensing. The LabTec™ comes with a 1082 Tandem peristaltic pump head. Up to 10 different dispensing volumes can be stored and easily retrieved for quick batch volume dispensing. An optional sterilizing filter and disposable pressure sensor provide for in-line buffer sterilization and reliable detection of filter plug-up conditions. Typical performance results including dispensing times are summarized in Table 2. The LabTec™ is easy to calibrate. A stored calibration curve is provided for each pump head/pump tubing combination. From a stored menu, you select the pump tubing you have installed in the LabTec™. For high accuracy dispensing applications, you may want to use the LabTec™s single-point re-cal feature.

Fast, Accurate Dispensing and Sterilization

In this configuration, the LabTec $^{\rm TM}$ is connected to an electronic scale for high accuracy filling applications. A sterilizing filter and a disposable pressure transducer provide a safe and effective in-line filter sterilization capability. The LabTec $^{\text{TM}}$ continuously monitors the filter backpressure and alarms when a user-defined pressure level has been exceeded, which indicates a filter plug-up condition. See Table 3. The high dispensing accuracy is achieved by reducing the pump rate as final target weight is being approached. The slow-down avoids overshooting the target weight. After slow-down, the LabTec™ pump stops briefly when 99% of the final target weight has been dispensed. The electronic scale is allowed to come to a steady-state readout and the LabTec™ slowly starts up again to dispense the remaining solution.

Example: 200-LABT-1181 - SciLog® LabTec™ - 160 RPM motor and 1081 head

The SciLog® MabTec® is an automated high density cell culture system.

The MabTec® high density cell culture system is a fully automated gravimetric bioreactor maintenance system. Its capabilities include automated feed, harvest or recirculation in fully disposable or hybrid bioreactor flow paths. The system also includes the ability to conduct unattended bioreactor inoculations, bolus feed and/or pump flow reversals (to prevent filter fouling) all on one unit with run times from hours to months.

The MabTec® is available with a choice of pump heads and can feed bioreactor sizes from 50mL to 2000L. The MabTec® is engineered to fit seamlessly with any bioreactor and enhance its performance. A laboratory scale, available separately, must be connected to use the MabTec®'s gravimetric features.

Features and Benefits

- Safe, walk-away system operation
- Maintains a steady state bioreactor weight / volume within +/- 0.5%
- Real-time data collection with optimization tools
- Small, lightweight and mobile

- Works with any bioreactor
- Eliminates bioreactor addition errors
- Reduces aggregation of cells in the perfusion filter
- Intuitive application interface

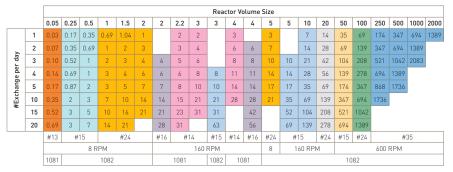

SciLog® MabTec®

600 RPM with 1082 and #24 tubing
600 RPM with 1082 and #35 tubing

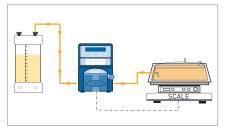

Fig. 1 Pre-Programmed Modes

The MabTec® has a pre-programmed mode for inoculating, transfecting and induction when used with a laboratory scale.

This pre-programmed mode allows the user to deliver precise additions without being physically present, which is ideal for processes that are scheduled to run at inconvenient hours or on a repeated schedule.

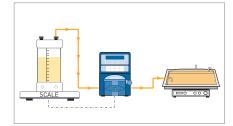

Fig.2 - Fed Batch

The MabTec® can be used to automate the feeding of cell cultures. Automation of this process greatly reduces the possibility of human error while reducing operator time. The MabTec® can be programmed to deliver a continuous feed for a specified number of days up to 100. Two modes exist for feeding; one that monitors levels in the reactor and makes additions while the other monitors the reactor and amount of feed media.

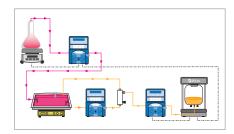

Fig. 3 - Ultra High Density Cell Culture

The MabTec® system is uniquely designed to provide a complete perfusion strategy. The user is able to maintain fresh media in the reactor, remove the desired component or prevent the build-up of waste products, all without a scale under the bioreactor. By keeping bioreactor weight maintained to within 2% and providing a constant stream of nutrient rich and pH buffered media, the bioreactor environment becomes ideal for ultra high density cell cultures.

Performance Characteristics

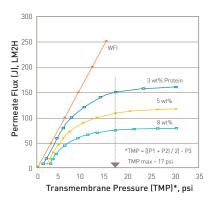

Fig. 1 - Transmembrane Pressure vs. Permeate Flux

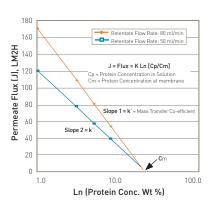

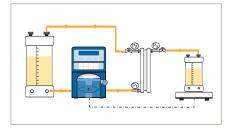

Fig. 2 - Ln [Protein Conc, (CP)] vs. Permeate Flux (J)

In TFF, concentration procedures, a dilute protein solution (~1.0 g/L) is re-circulated, through a TFF filter whose selected porosity allows only solvent (water) and dissolved salt to pass through the filter pores and is collected as permeate. The removal of water leaves an increasingly concentrated protein solution behind as retentate. The gradual removal of water causes a gradual increase in solution viscosity during the TFF concentration step. Permeate flux, transmembrane pressure [TMP] and cross flow rate are significantly affected by solution viscosity changes.

In order to maintain an optimal permeate flux, both cross flow rate and measured TMP require frequent, manual adjustment during the TFF concentration procedure. The PureTec® has the control methods to perform the operation automatically via constant or stepped cross flow rate, inlet pressure or transmembrane pressure. The system will automatically stop when the user defined concentration factor has been reached.

Applications

Concentration

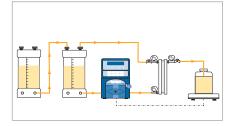

In the constant pump rate or pressure modes, you can implement your selected pump rate or pressures and use some or all of five alarm conditions. The pump rate or pressures can be increased or decreased "on-the-fly" without stopping the pump action

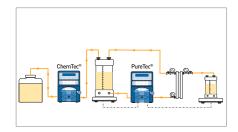

In the constant rate mode, increasing the feed rate in a stepwise fashion and simultaneously monitoring the permeate collection rate allows you to readily determine the optimal feed rate with the highest permeate yield (See figure 2).

In the constant pressure mode, increasing the trans-membrane pressure (TMP) in a step-wise fashion and simultaneously monitoring the permeate collection rate allows you to determine the optimal TMP with the highest permeate yield (See figure 1).

Diafiltration via Suction

Diafiltration via ChemTec®

In diafiltration procedures, a protein solution is "washed", i.e. de-salted, using an exchange buffer to remove undesirable electrolyte (dissolved salt). The concentrated protein solution is re-circulated, through a TFF filter whose selected porosity allows only the undesirable electrolyte to pass through the filter pores, which is collected as permeate. The permeate volume (undesirable electrolyte) that has been removed from the concentrated protein solution (retentate) is replaced with an (desirable) exchange buffer. In constant volume diafiltration or "washing" procedure, the collected electrolyte is automatically replaced by an equal volume of exchange buffer. Approximately ten (10x) volume exchanges are typically required for substantial removal of undesirable electrolyte from the concentrated protein solution.

Diafiltration via suction:

For small volumes a SciLog® pressure vessel stored with buffer can be connected to the secondary inlet port on the retentate vessel. While keeping a closed system the retentate vessel will automatically draw out buffer to replace the salt and solvent that has been removed by the filter. The process will continue until the PureTec® has reached its programmable end points.

Diafiltration via ChemTec®:

For larger volumes the SciLog® ChemTec® system and an appropriately sized balance will monitor and maintain the fluid in the PureTec®'s retentate vessel. The ChemTec® will maintain the level until a user defined volume exchange has been reached.

Specifications

	Description
Dimension / Weight	Width: 5.75" (146 mm) x height: 8.5" (2126 mm) x depth: 11" (279 mm): 14 lbs (6.4 kg)
Enclosure & Rating	16 Ga, aluminium baked epoxy blue 4-40dC, 0-100% humidity, IP20
Pressure Sensors	Accommodates three disposable pressure sensors. The calibrated pressure range is 0 - 60 psi. Any point within this range can be recalibrated using an external pressure reference source.
Power	115 / 220-240 VAC, 60 / 50 Hz, 75 Watts, double fused: T1AL 250V (CE: IR35A 250VAC)
Motor / Encoder	8, 160, 600 30 VDC, 3.8A, 120 ppr 8 & 160 RPM, 100 ppr 600 RPM
I/O Ports	Male DB9 scale connections (RS-232), female DB9 printer or PC connection (RS-232), external IO DB37 connector, 1 TTL input, 4 TTL output, 3 4-20mA Analog Input: Constant rate / constant pressure filtration with size user-definable alarms
Operational Mode	Constant pump rate, constant inlet or transmembrane pressure (TMP)

SciLog® SciFlex® NFF

- intelligent bioprocessing system
- semi-automated NFF

The SciLog® SciFlex® NFF is a proven semi-automated single-use platform to use in discovery to production-scale normal flow applications.

The SciFlex® NFF automated single-use normal flow filtration (NFF) system automatically monitors, adjusts and documents pressures and flow rate to optimize processing times, and maximize filter life and efficiency. Using the onboard sensors and automation we eliminate the need for constant monitoring during production runs. The SciFlex® system's 'Open Architecture' design means there is no need to change existing filter or membrane types / manufacturers because this system will work with any supplier's filter.

Via a colour, touch screen and pre-installed operational software, users have the ability to execute a normal flow filtration process via four different control methods. User-selectable end points and alarms enable walk-away operation and ensure safe, consistent process performance. Patented, proprietary technology enables automated system response to in-line SciPres® pressure sensor feedback and the selectable maintenance of a user-definable flow rate, inlet filter pressure, or both. The system can optimize your filtration throughput by up to 30% while communicating real time process parameters via OPC to a plant historian. Up to two optional integrated scales can be used to deliver filtration precision by gravimetrically controlling operations.

Features and Benefits

- Walk-away automation improves filter throughput using patented rate pressure controlled feed
- Options for fully disposable, semi-disposable, or stainless CIP flowpaths
- Configurable for multiple or flexible processes
- Accommodates any commercially available filter
- Touch-screen interface with optional OPC connectivity for process documentation or remote control
- Mobile and compact base
- User configurable alarms and interlocks
- Optional integrated scale for highly accurate filtration endpoints

Note: SciLog®, SciFlex® and SciPres® are registered trademarks of Parker Hannifin Corporation.

The SciFlex® NFF semi-automated system offers four modes of process control:

- Constant Rate NFF:
 Maintain rate, monitor pressure.

 The system will ensure pressure does not exceed a high limit set point.
- Constant Pressure NFF:
 Maintain pressure, monitor rate.

 The system will ensure rate does not exceed a minimum set point.
- R/P Stat Method: The system maintains a constant rate, monitoring pressure until a selectable pressure is reached. At this pressure, the system immediately switches to constant pressure, monitoring rate (see Figure 1.) until a minimum set point is reached.
- Manual Operation: User definable motor set point

Batch control is ensured:

Recipes can be conveniently stored and recalled at the time of execution to save time and reduce the risk of parameters being installed incorrectly.

 Up to 10 sequential steps can be stored to provide continuous processing.

Applications

Viral filtration

Cell harvesting

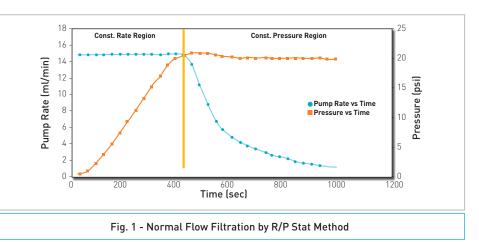

Chromatography column loading

Clarification and sterilization

Performance Characteristics

R/P Stat Method

The SciFlex® NFF system incorporates the patented R/P Stat Method, an innovation which has resulted in significant improvements in filter life expectancy. This is done by selecting three simple process variables including initial flow rate, maximum inlet pressure, and minimum flow rate. By using the R/P Stat Method, as the membrane begins to foul, the SciFlex® NFF system dynamically adjusts the flow rate which allows additional product to pass through the filter before the membrane fouls.

Specifications

	Description
Dimension	Footprint as small as 20" x 30" (0.50m x 0.76m), varies by model.
Enclosure & Rating	304 stainless steel framework, mobile platform with pharmaceutical grade casters, NEMA 4X, IP65 rated cabinet.
Pressure Sensors	Accommodates 3 x disposable pressure sensors.
Power	208V single phase, 60Hz, 20A; or 208V three phase, 60Hz, 20A; or 220V +/- 10% single phase, 50 Hz, 20A.
I/O Ports	Connections for 3 x SciPres® pressure sensors, connections for 2 x scales to monitor flux of media through filter.
Operational Mode	Constant rate, R/P Stat Method, constant pressure and manual mode.

Options and Accessories

- IQ/OQ documentation package to support validation efforts
- SciLog® sensors
- Single-use bioprocessing containers and manifolds
- WeighStation™
- Test manifold
- Several possible pump configurations

Ordering Information

Please contact your local Parker domnick hunter representative to discuss how these systems can be configured for your needs.

The SciLog® SciFlex® Filter and Dispense System is an automated single-use system for the bulk filtration and container fill of purified biopharmaceuticals.

The two operations can be performed within a completely enclosed environment giving maximum protection to operator and product alike. An in-line filter integrity test provides assurance the filtration has been effective prior to filling into containers.

The SciLog® SciFlex® Filter and Dispense System's open architecture design accommodates Parker domnick hunter or any other commercially available filter.

Features and Benefits

- Automated system for performing final bulk filtration and dispensing
- Integrated WeighStation[™] provides gravimetric dispensing control.
- SciPres® Pressure Sensors and R/P Stat Method incorporated to ensure validated pressure limits are not exceeded during critical sterilizing-grade filtration
- Touch-screen interface with OPC connectivity for process documentation
- Mobile and compact base
- User and consumable alarms and interlocks
- Four standard filtration modes of control
- Closed system processing

- Intuitive easy to learn and use software
- Barcode interlocking mechanism prevents operation with incorrectly loaded manifolds
- Integrated label printer allows container and documentation labelling with recipe parameters on labels suitable for cryogenic storage
- Printer alarms if no labels are loaded to prevent data loss
- Fully disposable flow path
- Folding trays for documentation and tube welders
- A variety of sterile disconnectors are available

SciLog® SciFlex® Filter and Dispense System

- final bulk filtration & dispense
- manual, semi or fully automated

Note: SciLog®, SciFlex®, SciPres® and WeighStation™ are registered trademarks of Parker Hannifin Corporation.

SciLog® SciFlex® Filter and Dispense System

The SciLog® SciFlex® Filter and Dispense System offers four modes of process control:

- Constant Rate NFF:
 Maintain rate, monitor pressure.
 The system will ensure pressure does not exceed a high limit set point.
- Constant Pressure NFF:
 Maintain pressure, monitor rate.

 The system will ensure rate does not exceed a minimum set point.
- R/P Stat Method: The system maintains a constant rate, monitoring pressure until a selectable pressure is reached. At this pressure, the system immediately switches to constant pressure, monitoring rate until a minimum set point is reached.
- Manual Operation: User definable motor set point

Batch control is ensured:

Recipes can be conveniently stored and recalled at the time of execution to save time and reduce the risk of parameters being installed incorrectly.

Up to 10 sequential steps can be stored to provide continuous processing.

The SciLog® SciFlex® Filter and Dispense system automates a 10 step process:

- 1. Water flush to waste
- 2. Filter equilibration to waste
- 3. Air purge to waste
- 4. Product filtration to BPC
- 5. Air purge to maximize recovery
- 6. In-line filter integrity test
- 7. Reconfigure system for dispensing
- 8. Dispense and bottle manifolds primed
- 9. Container filling
- 10. Product recovery

Specifications

	Description
Dimensions	Operating footprint 70" x 28" (1.7m x 0.7m)
Enclosure & Rating	304 stainless steel framework, mobile platform with pharmaceutical grade casters, NEMA 4X, IP65 rated cabinet
Power	230V +/- 10%, 1P/3P, 50/60Hz (Power section)
I/O Ports	Auxillary ports for balances, mixers and sensors
Operational Mode	Constant rate, R/P Stat Method, constant pressure and manual mode
Dispense Capacity	Up to 250L of final drug substance can be dispensed into bags or bottles in aliquots of 100mL to 2L
Minimum Dispense Accuracy	±10g

Options and Accessories

- Parker domnick hunter pre and membrane filters
- SciLog® sensors
- Single-use bioprocessing containers and manifolds
- Test manifold

- IQ/OQ documentation package to support validation efforts
- WeighStation™
- Serialized weight confirmation kits

Ordering Information

Please contact your local Parker domnick hunter representative to discuss how these systems can be configured for your needs.

SciLog® SciFlex® TFF

- intelligent bioprocessing system
- semi-automated TFF

The SciLog® SciFlex® TFF is an automated tangential flow filtration system.

The SciFlex® TFF is a semi-automated, single-use tangential flow filtration (TFF) system that automatically monitors, adjusts and documents pressures and flow rate to optimize filtration speed and maximize filter life and efficiency, eliminating the need for constant monitoring during runs.

The SciFlex® system's 'Open Architecture' design means there is no need to change filter or membrane types because this system will work with any supplier's filter. An integrated scale can be used to gravimetrically control concentration, while the inline SciPres® pressure sensors monitor transmembrane pressure to prevent extreme pressure over the membrane.

Features and Benefits

- Automated onboard filtration methods
- OPC data collection via ethernet
- Integrated SciPres® pressure sensors
- Safe, walk-away system operation

- Intuitive application interface
- 'Open Architecture' engineering enables this system to work with most filters or membranes

Note: SciLog®, SciFlex® and SciPres® are registered trademarks of Parker Hannifin Corporation.

The SciFlex® TFF semi-automated system offers three modes of process control:

- Constant Rate TFF:
 Maintain rate, monitor pressure.
 The system will ensure pressure does not exceed set point.
- Constant Pressure TFF:
 Maintain pressure, monitor rate.
 The system will ensure rate does not exceed set point.
- Manual Operation: User definable motor set point.
- Constant Rate / Constant Pressure TFF is available as an optional upgrade: Maintain rate set by user as well as transmembrane pressure by modulating a nonproduct contact proportional valve in the retentate line. The system will ensure pressure does not exceed set point.

Batch control is ensured:

Recipes can be conveniently stored and recalled at the time of execution to save time and reduce the risk of parameters being installed incorrectly.

 Up to 10 sequential steps can be stored to provide continuous processing.

Simple Concentration Method Example:

- A user selected concentration factor is implemented as soon as the run begins an initial weight set point is established from the integrated scale.
- Filtration continues until the predetermined concentration factor is reached, while the inline pressure sensors monitor transmembrane pressure (TMP) to prevent extreme pressures over the membrane.
- The SciFlex® automatically stops the method when the target weight is reached and displays a note to prevent accidental restart of the system at the endpoint.
- Diafiltration can then occur at any time after the note is cleared in another fully automated mode.

Ordering Information

Please contact your local Parker domnick hunter representative to discuss how these systems can be configured for your needs.

Accelerate to market and reduce your purification costs with the $SciLog^{\otimes}$ $SciPure^{TM}$ TFF and NFF Systems.

The SciPureTM system's user-friendly interface and menu-driven operation with data acquisition (21 CFR Part 11) make them ideal for GMP manufacturing. Systems come with a comprehensive documentation package that drastically reduces validation times.

Semi-manual to fully-automated operation makes tech transfer seamless and accommodates existing processes. The SciPure™ 'Open Architecture' design allows you to use any manufacturer's filters.

Contact Parker domnick hunter to discuss how the SciPure™ system can be quickly configured to accommodate your TFF and NFF needs. We have one of the shortest lead times in the industry.

Features and Benefits

- Maintains optimal TFF or NFF conditions with fully-automated control
- User-friendly with full colour graphical display, touch-screen and menu-driven operation
- User definable recipes and parameters, or real-time control
- Reduces purification costs by optimizing, controlling and documenting your processes

- Batch method generator
- Configured single-use or stainless steel manifolds with minimum hold-up volume
- Can be used with any manufacturer's filters
- Ethernet IP
- User administrative controls

- fully-automated bioprocessing system
- GMP-ready TFF and NFF

Configured Single-Use Manifolds

Individualized, pre-packaged and presterilized manifolds not only reduce cleaning and cleaning validation times, but also reduce setup time by engineering your application and ensuring installation success. You can set up recurring orders for just-in-time delivery of manifolds or they can be stored in secure inventory and atmosphere controlled warehouses. All flowpath designs are individually configured and drawn by in-house engineers.

Integrated with filters, sensors, and bioprocess containers, single-use manifolds can be pre-assembled and sterilized with SciLog® SciPres® pressure sensors, Parker domnick hunter filters (or filters of your choice), as well as single-use bioreactor, collection or hanging bioprocess containers.

Manifolds for TFF

Manifolds can be provided pre-assembled with sensors and integrated filter plate insert for flat sheet membranes or gammastable hollow fiber filters.

SciLog® WeighStation™

- gravimetric fluid handling platform
- mobile bioprocessing workstation

The SciLog® WeighStation™ family is an assortment of mobile, compact, bioprocessing container holders with integrated scales for gravimetric fluid handling.

The SciLog[®] WeighStation™ serves as a flexible platform that provides quantitative and reproducible fluid measurement for a wide range of upstream and downstream applications.

With several biocontainer options, there is a WeighStation™ to match your process. Systems are available to accommodate 5L to 200L bags and are available with optional display heads or without load cells.

All SciLog® WeighStations™ can also be readily integrated into Parker domnick hunter or other manufacturers' systems, making them a convenient gravimetric solution for existing processes. The WeighStation™ can interface with your data historian, local display, printer or spreadsheet.

Features and Benefits

- Mobile design / small footprint
- Gravimetric application control
- Optional displays
- Multiple configurations
- Operator friendly design
- Easily integrates with existing systems

Note: SciLog® & WeighStation™ is a trademark of Parker Hannifin Corporation

^{*} Recommended volume < 35L per bioprocess container

Model Options

WeighStation™

The WeighStation™ is a vertical bioprocess container (BPC) holder with gravimetric feedback. The base model can accommodate one to three (3) 50Kg single-use hanging BPC. Even when fully loaded, the four locking castors enable a single user to move the unit from location to location with ease. This mobile hanging balance eliminates the tiresome balancing of BPCs on mobile carts and provides safe complete drainage or 100% sample recovery without requiring a second operator to hold the BPC.

WeighCart™

WeighCart™ is a mobile BPC holder with gravimetric feedback that easily accommodates 100L or 200L bioprocess containers. These two options are typically assembled with a 150Kg balance or a 300Kg balance. Stock system include a worktop and supports to mount a SciLog® laboratory automated liquid handling system. Other accessories and balance options are available.

WeighPro™

The WeighPro™ is a mobile bioprocessing workstation that can be configured to any application. The unit includes a 50Kg vertical bioprocess container holder with gravimetric feedback and, as shown, optional adjustable filter, tubing, sensor and pump mounts. The system can be quickly configured for various bioprocessing projects without sacrificing space or capital.

WeighSmart™

The WeighSmart™ is a vertical BPC holder with gravimetric feedback that can be used with a GE ReadyKart. The units may also be integrated on your existing systems or wall mounted in your laboratory. The WeighSmart™ can handle up 50Kg and includes a height adjustable foot for easy integration and added stability.

mitos-P is a nonreinforced platinum-cured silicone tubing with lot and part number etched directly onto the tubing. mitos-P is well suited for performance in applications requiring use of peristaltic pumps and / or molded assemblies.

This precision tubing is manufactured with an automated control system that repeatedly measures the inner bore and wall thickness, maintaining a 0.002" to 0.008" tolerance.

Features and Benefits

- Lot number, tube ID and wall thickness marked on each tube
- Tightest wall tolerance available (0.002" to 0.008")
- Ideal for molding with other silicones into manifold assemblies (Ts, Ys, crosses, elbows and reducers)
- Certificate of conformance included with each order

- Manufactured in ISO Class 7 cleanroom
- Can be chemically or mechanically cleaned and can be sterilized by chemicals, autoclave or gamma-irradiation
- Available in four different wall thicknesses and internal diameters up to 1"

mitos-P

Ideal for use in peristaltic pumps and molded assemblies

mitos-P is the preferred platinum-cured silicone tubing for use in peristaltic pumps and molded assemblies because of its consistency in dimensions. This consistency delivers optimum performance in both applications by providing steady flow rates during pumping and by ensuring better bonding during molding, giving greater integrity to the assembly.

Applications

Single-use applications

Molded manifold assemblies

Peristaltic pumps

Bioprocess container systems

Low pressure transfer lines

Parker domnick hunter technologies can be combined to produce integrated solutions that will speed up development times, increase efficiency and safety, and guarantee reproducible product quality.

mitos-R is a platinum-cured silicone hose with polyester fibre braid reinforcement structure to maintain flexibility, withstand high pressure and resist kinking.

This hose can be molded with other silicones into manifold assemblies with molded tri-clamp, creating seamless and crevice-free fittings. It can also be used in radially-crimped hose assemblies.

Features and Benefits

- Lot number and customized information directly on hose with CLEAR-mark® label*
- Can be molded with other silicones into manifold assemblies (Ts, Ys, crosses, elbows and reducers)
- Animal derived component free
- Certificate of conformance with each order

- Manufactured in ISO Class 7 clean room
- Can be chemically or mechanically cleaned and can be sterilized by chemicals, autoclave or gamma-irradiation
- SIP / CIP capable
- Available with internal diameter up to 1"

Reinforced platinum-cured silicone tubingWithstands high pressure, resists kinking

Molded silicone fittings

Molded silicone fittings are the ideal option when there is need for an easily cleanable assembly, or to reduce the risk of cross-contamination. In each molded fitting, the elastomer chains of the platinum-cured silicone are cross-linked to create a permanent molecular bond to the tubing. A special feature of our molded tri-clamp is an integrated gasket that, when connected to another fitting, eliminates 50% of the sealing faces creating seamless and crevice-free fittings. For extra support, we offer a full stainless steel or polysulfone back-up cup on the outside of each molded fitting. Our plastic back-up cups have a unique wraparound design that fully encases the tri-clamp mold.

Fittings

Parker domnick hunter offers a comprehensive line of industry standard connection options. All stainless steel fittings are 316 stainless steel and are available in an electropolished (<15 Ra) or standard machine finish (20 Ra). Our stainless steel fittings are manufactured in a U.S. based facility dedicated exclusively to fabricating sanitary fittings for the biotech industry. Parker domnick hunter fittings are unparalleled in material consistency, dimensions, surface finish, and craftsmanship. All fittings feature a heat identifier which allow them to be fully traceable. Styles include molded tri-clamp, radially-crimped stainless steel (shown below with mitos-WCO hose) and other industry standard connections.

Parker domnick hunter technologies can be combined to produce integrated solutions that will speed up development times, increase efficiency and safety, and guarantee reproducible product quality.

Molded silicone manifolds

- Permanent connection prevents product loss
- Seamless, crevice-free, eliminates entrapment areas

With custom-designed manifolds, Parker domnick hunter molds imagination into reality. Whether a foot-long piece of tubing with sanitary ends or a manifold with over 100 junctions, Parker domnick hunter can mold single- or multi-use systems tailored to your application.

Our proprietary overmolding technology allows for any configuration of Ys, Ts, crosses, reducers, elbows and molded tri-clamps with unlimited lengths between molds. Inside diameters are available from 1/8 to 1".

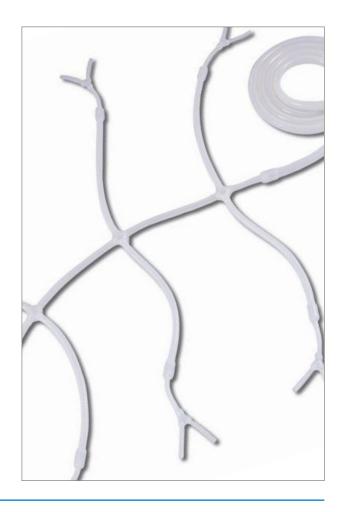

Each mold is molecularly bonded to the tubing by cross-linking of the elastomer chains. This permanent connection prevents product loss and contamination commonly experienced with hose barb failures. Internally, molds are seamless and crevice-free to eliminate entrapment areas and potential contamination.

Molded silicone manifolds can be created out of mitos-P or mitos-R tubing. Parker domnick hunter molded manifolds are fully validated and delivered with a certificate of conformance.

Features and Benefits

- Stronger, seamless molded junctions eliminate entrapment areas
- Configured for your requirements
- All materials used in the manufacture of the single manifolds are fully traceable
- Molded silicone manifolds are manufactured free from known

- animal components
- Single manifolds can be gamma irradiated
- Storing at room temperature (~65-70 °F) is recommended for silicone manifolds. Shelf-life: physical property test data is available for product stored after irradiation
- Manufactured in a Class 7 (10,000) cleanroom

Molded silicone fittings

Molded silicone fittings are the ideal option when there is need for an easily cleanable assembly, or to reduce the risk of crosscontamination. In each molded fitting, the elastomer chains of the platinum-cured silicone are cross-linked to create a permanent molecular bond to the tubing. A special feature of our molded tri-clamp is an integrated gasket that, when connected to another fitting, eliminates 50% of the sealing faces creating seamless and crevice-free fittings. For extra support, we offer a full stainless steel or polysulfone back-up cup on the outside of each molded fitting. Our plastic back-up cups have a unique wraparound design that fully encases the tri-clamp mold.

to fit your application needs.

Parker domnick hunter has expanded its DuraPure™ bioprocess container line into an integrated fluid-handling system designed for durability and purity.

Each system is designed to seamlessly integrate with the rest of your process, whether it is going from media prep to cell culture, or ultra-filtration to final fill. DuraPure™ bioprocess container systems are available with the 2-ply DuraPure films, or the single-ply DuraPure™ C93 film.

DuraPure™ containers are offered in sizes ranging from 1L to 2000L in 3 dimensional bag designs. For 2 dimensional pillow bags the sizes range from 50ml to 200L. The product contact layer of the 2-ply DuraPure™ container is made of a LDPE (Low Density Polyethylene) film, and the external layer is made of a LLDPE film (Lineal Low Density Polyethylene) film.

DuraPureTM C93 film is a high purity coextruded biopharmaceutical-grade film designed to provide the best combination of strength, flexibility, inert product contact and gas barrier. The product contact layer is ultra low density polyethylene (ULDPE). The gas barrier layer is polyethylene vinyl acetate copolymers (EVOH).

Features and Benefits

- 2D & 3D DuraPure™ and DuraPure™ C93 containers are available in 15L to 2000L sizes
- A range of ports is available from ¹/₈" to 1"
- mitos-P platinum-cured tubing with molded junctions and sanitary fittings

DuraPure™ Bioprocess container systems

- Single-use liquid handling systems
- Customized for your requirements

Note: $\mathsf{Dura}\mathsf{Pure}^\mathsf{TM}$ is a trademark of Parker Hannifin Corporation.

Ideal for use in peristaltic pumps and molded assemblies

mitos-P is the preferred platinum-cured silicone tubing for use in peristaltic pumps and molded assemblies because of its consistency in dimensions. This consistency delivers optimum performance in both applications by providing steady flow rates during pumping and by ensuring better bonding during molding, giving greater integrity to the assembly.

Connectors

We provide a full line of connectors from many manufacturers that are all compatible with Parker domnick hunter components and systems. With every different type of connector option available, it is our goal to be able to provide our customers with one-stop-shop convenience to meet all connection needs.

Parker domnick hunter technologies can be combined to produce integrated solutions that will speed up development times, increase efficiency and safety, and guarantee reproducible product quality.

Parker domnick hunter has expanded its DuraPure™ C93 single ply bioprocess container line into an integrated fluid-handling system designed for durability and purity.

Each system is designed to seamlessly integrate with the rest of your process, whether it is going from media prep to cell culture, or ultrafiltration to final fill.

DuraPure™ C93 film is a high clarity medical film designed to provide the best combination of strength, flexibility, gas barrier and low extractables. The product contact layer of this 5-layer film is ultra low density polyethylene (ULDPE). The gas barrier layer is ethylene vinyl alcohol (EVOH). The recommended working temperature range of DuraPure™ C93 film is 0 °C to 60 °C, but it has been used in applications for short term exposures at temperatures less than -45 °C and up to 80 °C.

Features and Benefits

- 2D & 3D DuraPure™ C93 containers are available in 50ml to 2000L sizes
- A range of ports is available from 1/, " to 1"
- mitos-P platinum-cured silicone tubing with molded junctions and sanitary fittings, or TPE tubing and fittings
- DuraPure™ C93 bioprocessing containers are manufactured free from known animal derived components
- All materials used in the manufacture of the DuraPure™ C93 BPCs are fully traceable
- DuraPure™ C93 BPCs can be gamma irradiated
- Storing at room temperature (~65-70 °F) is recommended for DuraPure™ C93 BPCs.
 Shelf-life: physical property test data is available for product stored after irradiation
- Manufactured in a Class 7 (10,000) cleanroom

- Autoclavable single-use containers
- Kynar® PVDF film for strength and flexibility

klave-it™ autoclavable bioprocess containers from Parker domnick hunter are made of a select Kynar® PVDF film designed to maintain flexibility, strength and impact resistance after sterilization by autoclave.

Autoclaving bioprocess container systems in-house provides greater control and more adaptive sampling procedures. klave-itTM bioprocess containers can also be filled and then autoclaved. Because klave-itTM film is constructed of a fluorinated polymer, it has excellent chemical resistance to minimize leachables, making it safe for use with critical products.

Features and Benefits

- Low TOC (total organic carbon)
- Low permeability
- USP Class VI
- Animal derived component free
- Available in pillow style
- Ports are available in $\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$ and $\frac{1}{2}$ sizes

Note: klave-it™ is a trademark of Parker Hannifin Corporation.

Applications

Any application in which preor post-filling sterilization by autoclaving is required

Parker domnick hunter technologies can be combined to produce integrated solutions that will speed up development times, increase efficiency and safety, and guarantee reproducible product quality.

FREE FLOW® Valves

- Quick change valve elements
- · Pneumatic & manual actuated
- · Crevice-free, steam through flow path

FREE FLOW® valves from Parker domnick hunter are designed specifically for the biotech industry. The straight through bore eliminates turbulence to significantly reduce shear in the process line.

The unique FREE FLOW® valve utilizes a replaceable valve element that has a smooth, obstruction free bore. The valve is designed to control the flow of the liquid from outside of the tubing, avoiding direct contact of the valve components with the fluid flow path. The crevice free flow path is conducive to easy and thorough cleaning, and the quick release hinge technology allows fast element changes without the use of tools.

FREE FLOW® valves are available in three tubing sizes; $\frac{1}{2}$ ", $\frac{3}{4}$ " and 1" with three tubing element options, or without an element.

Manually operated valves are easily actuated by rotating the hand wheel until snug. There is no need for tools. Pneumatically operated valves come ready to connect to an air supply. No field adjustments are necessary.

Features and Benefits

- Quick release, tool free element change out
- Easy to clean, seamless straight through flow path with no crevices to collect residue
- Ideal for clamping tubing to isolate filters
- Three sizes: 1/2", 3/4" and 1"
- Valve element material options include: platinum-cured silicone, PTFE reinforced silicone (PCS) and PTFE reinforced perfluoro-elastomer (PFL) tubing (Contact Parker domnick hunter for size and material availability)
- Steam through capability
- Replaces troublesome weir type diaphragm valves

Note: FREE FLOW $\!\!^{\scriptscriptstyle{\textcircled{\tiny 0}}}$ is a registered trademark of Parker Hannifin Corporation.

FREE FLOW® Valve Elements

FREE FLOW® valve elements are available in platinum-cured silicone, PCS or PFL. PFL elements are constructed with crimped 316 stainless steel ends.

Platinum-cured silicone and PCS elements are constructed with tri-clamp type molecularly bonded, molded silicone ends with integrated gaskets ends, or with crimped 316 stainless steel ends.

In each molded fitting, the elastomer chains of the platinum-cured silicone are cross-linked to create a permanent molecular bond to the tubing. A special feature of our molded tri-clamp is an integrated gasket that, when connected to another fitting, eliminates 50% of the sealing faces creating seamless and crevice-free fittings. For extra support, we offer a full stainless steel on the outside of each molded fitting.

Pneumatically actuated valve Materials of construction

■ Body: 304 stainless steel ■ Valve sealing anvils: polyphenylene sulfide (PPS)

17-4PH stainless steel ■ Springs: ■ Fasteners: 18-8 stainless steel ■ Seals: Nitrile and EPDM

Stem guides: PEEK PVDF ■ Piston stop: Lubricant: Silicone gel

Note: 316L stainless steel is available by special order.

FREE FLOW® Sampling Valves

- Manually actuated parent and child valves
- Multiple ports with smooth flow paths and steam through capability

FREE FLOW® sampling valves from Parker domnick hunter have a standard three port configuration consisting of manually actuated parent and child valves in a stainless steel housing.

The smooth bored tubing element is molded into a seamless T shape to convey fluid through the three ports. Valve sealing anvils along with compression bars control the flow from outside the tubing, never having contact with the media. Quick release hinge technology allows fast element changes without the use of tools.

Each port has a molded tri-clamp end with an integrated gasket to reduce sealing faces and potential contamination. Custom continuous tubing elements are also available.

Manually operated valves are easily actuated by rotating the hand wheel until snug. There is no need for tools. Pneumatically operated valves come ready to connect to an air supply. No field adjustments are necessary.

Features and Benefits

- Quick release, tool free element change out
- Easy to clean, seamless straight through flow path
- Ideal for large volume sampling, additions, and block and bleed applications
- Valve element material is platinum cured silicone
- Completely drainable in any position
- Steam through capability

Note: FREE FLOW $\!\!^{\scriptscriptstyle{\textcircled{\tiny 0}}}$ is a registered trademark of Parker Hannifin Corporation.

FREE FLOW® Sampling Valve Tubing Elements

The tube element material is molded into a T configuration providing a seamless fluid path with no areas of entrapment. Custom elements can be molded with a continuous leg for connection to tubing and bag systems.

Parker domnick hunter's FREE FLOW® sampling valves feature quick release hinge technology for fast element changes. It is as simple as loosening the locking screws, unhinging the valve bodies, and removing the tubing element. Then all product contact surfaces can be disposed without the need for cleaning or sanitizing the stainless steel parts.

FREE FLOW® sampling valves Materials of construction

- liquid filters
- various membrane / media

Process and analytical filter discs from Parker domnick hunter are available in a range of pore size and a choice of five materials.

Membrane discs:

- Cellulose mixed esters
- Polyethersulphone
- Nylon

Fibrous media discs:

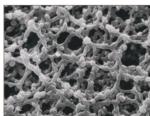

- · Glass microfibre
- Polypropylene

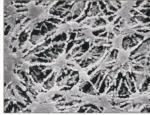

The discs are supplied interleaved between two protecting layers with the feed surface oriented upwards in the box.

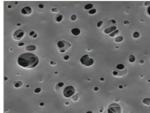

Features and Benefits

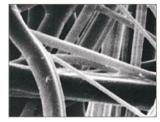

- High throughput rates
- Superior flow characteristics
- Easy to handle
- Reduced filtration time
- Low protein binding

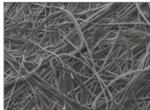

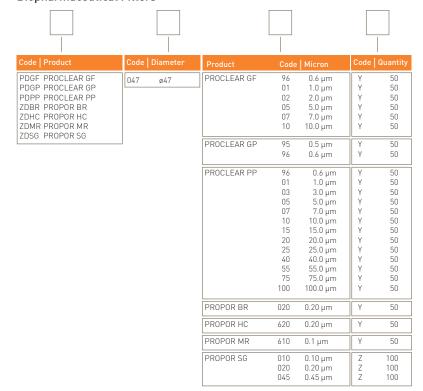

Biopharmaceutical Filters

Standard diameters 047 mm.

Diameters 025mm, 090 mm & 142 mm
are also available.

For full ordering information, variants,
quantities and availability,
please contact Parker domnick hunter.

HIGH FLOW PREPOR GFA Filters

- air / gas filters
- glass microfibre

HIGH FLOW PREPOR GFA is a high capacity glass fibre prefilter specifically designed for the removal of bulk particulate from compressed air and gases.

It is used extensively for prefiltration duties in dry compressed air systems and provides excellent protection for final sterile filters.

HIGH FLOW PREPOR GFA utilizes pleated glass fibre filter media encased within an upstream and downstream expanded polypropylene mesh filter support. The pleat pack is supported by an inner stainless steel core and outer heat stabilized polypropylene cage, heat bonded to heat stabilized polypropylene end caps.

The combination of high voids volume filter media and pleated construction results in a filter cartridge with exceptional dirt holding capacity, able to operate at very low differential pressures.

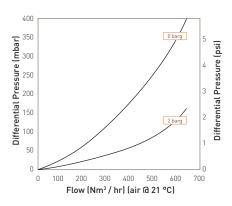

Features and Benefits

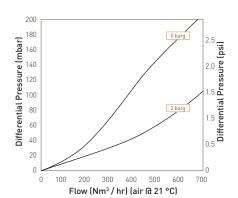

- High surface area and voids volume filter media
- Exceptionally high flow rates with low pressure drops
- Reliable efficient protection of final sterilization filters
- Heat stabilized componentry to allow operation at elevated temperatures

Note: PREPOR is a registered trademark of Parker Hannifin Corporation.

Performance Characteristics

PEPLYN AIR Filters

- air / gas filters
- meltblown polypropylene

PEPLYN AIR filter cartridges have been specifically designed to guarantee removal of particulate from gas streams.

They can be used to protect sterilizing grade filters in pressurized systems or in exhaust gas vent applications.

PEPLYN AIR is particularly suitable for:

- Inlet gas in the fermentation industry as protection to sterilizing grade filters where polypropylene media is preferred
- As protection to sterilizing grade filters in exhaust gas systems
- Vent applications
- Systems where high particulate loading is expected

PEPLYN AIR has the ability to be steam sterilized and has a broad range of chemical compatibility

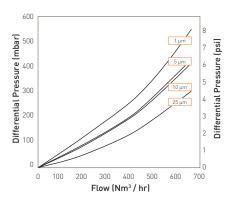

Features and Benefits

- Cost-effective prefiltration
- Absolute micron rating range from 1.0 25 micron
- High flow rates and long life
- Steam sterilizable
- Graded density for excellent particle retention
- No release of particles even during system pressure fluctuations

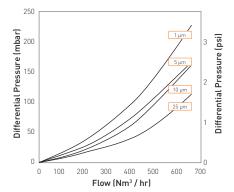

Note: PEPLYN is a registered trademark of Parker Hannifin Corporation.

Determination of Micron Ratings

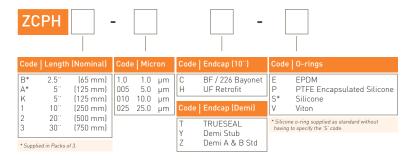

Particle removal efficiencies of PEPLYN AIR cartridges have been determined independently by challenging with a cut silica test dust, generated by BUS1701 dust injector used in conjunction with laser particle counters.

Micron Efficiency Ratings

Ordering Information

HIGH FLOW BIO-X combines proven depth filter technology and a pleated construction to provide retention down to 0.01 micron in gas.

Flow rates typically 2-3 times that of membrane filters make HIGH FLOW BIO-X the filter that can dramatically reduce cartridge usage and installation size within the fermentation, food and beverage industries.

The specially developed PTFE impregnation process imparts greater strength and permanent hydrophobicity to the borosilicate microfibre media. This leads to excellent performance in applications such as the provision of sterile gas in filling machines.

Features and Benefits

- 94% voids volume PTFE impregnated microfibre
- Wide bore cartridge construction to maximize flow rate
- Stainless steel inner core
- Exceptionally high flow rates with low pressure drops
- Fully validated by aerosolized bacterial and viral challenge

HIGH FLOW TETPOR II Filters

- air / gas filters
- expanded PTFE

HIGH FLOW TETPOR II gas sterilization filters have been developed to benefit from technological advances within the manufacture of PTFE membranes. This new generation of filter sets the standard with an unrivalled combination of efficiency, flow rate and strength.

HIGH FLOW TETPOR II is validated to provide sterilizing grade filtration performance against ASTM 838 liquid bacterial challenge methodology.

This ensures the filter will guarantee the sterility of your process in the worst-case scenario where the filter may be subjected to bulk liquid due to a process problem. Subtle changes to the structure of the hydrophobic PTFE have also resulted in the production of an extremely robust product validated for 225 steam sterilization cycles @ 142 °C [287.6 °F]. The combination of non-woven supports upstream of the membrane and an expanded net layer downstream has significant benefits, providing increased protection and service life while guaranteeing zero fibre shedding into the process.

HIGH FLOW TETPOR II is suitable for all sterile gas applications including fermentation inlet and off gas streams, venting, lyophilisers, autoclave vacuum breaks and blow-fill-seal equipment.

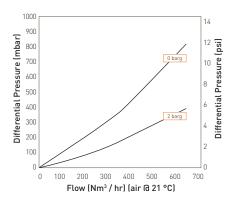

Features and Benefits

- Optimum pleat configuration
- Steam sterilizable up to 225 cycles at 142 °C (287.6 °F)
- Unrivalled flow rates combined with low pressure drops
- Fully validated to ASTM 838 for liquid bacterial challenge
- Fully validated to aerosol and viral challenge
- Integrity testable by all methods including water intrusion test

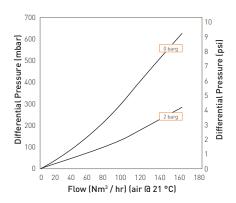

Note: TETPOR is a registered trademark of Parker Hannifin Corporation.

HF TETPOR H.T. Filters

- air / gas filters
- expanded PTFE

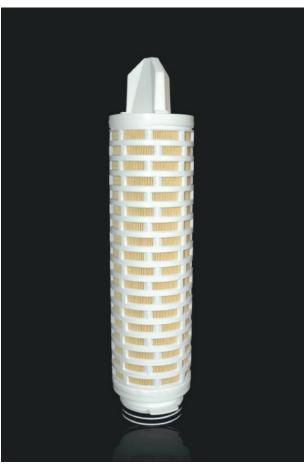

HIGH FLOW TETPOR H.T. gas sterilization filter cartridges provide unrivalled performance in process industry applications where continuous cartridge operation of up to 100 °C (212 °F) is a requirement.

Applications include specific biological fermentations which use high inlet air temperatures and heated vent filters on storage tanks whose contents are at elevated temperatures >80 °C (176 °F), e.g. WFI tanks.

HIGH FLOW TETPOR H.T. cartridges utilize a proven inherently hydrophobic, expanded PTFE membrane validated as sterilizing grade in liquid in accordance with ASTM F838-05. This ensures the removal of all airborne bacteria, viruses and bacteriophage. Polyaramid membrane support layers facilitate continuous operation at temperatures up to 100 °C (212 °F).

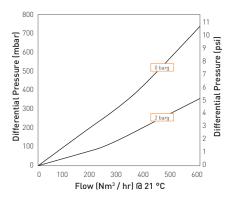

Features and Benefits

- Long service life even at elevated temperatures 100 °C (212 °F)
- Assured biosecurity with absolute rated filtration
- Stainless steel inner core
- Steam sterilizable to 142 °C (287 °F)
- Exceptionally high flow rates with low pressure drops

TETPOR AIR Filters

- air / gas filters
- expanded PTFE

TETPOR AIR sterilization filter cartridges offer exceptional filtration performance while providing the highest levels of biosecurity throughout the process industry.

Operating at ambient temperature conditions, TETPOR AIR filter cartridges provide a cost-effective filtration solution. A unique polypropylene prefilter layer extends service life in heavily contaminated environments.

TETPOR AIR filter cartridges also utilize a well-proven, inherently hydrophobic expanded PTFE membrane validated as sterilizing grade in liquid in accordance with current ASTM F838 methodology.

This ensures the removal of all airborne bacteria, viruses and bacteriophage.

Biological Safety

Materials conform to the relevant requirements of 21CFR Part 177 and current USP Plastics Class VI - 121 °C and ISO10993 equivalents.

Quality Standards

Pharmaceutical grade products are manufactured in accordance with cGMP, 100% flushed with pharmaceutical grade purified water and integrity tested prior to despatch. A sample of each lot is tested to demonstrate conformity to validated claims.

Performance Characteristics

TOC / Conductivity

The filtrate quality from a 10" (250 mm) TETPOR AIR conforms to the requirements of current USP <643> (TOC) and USP <645> (conductivity).

Endotoxins

Aqueous extracts from the 10" [250 mm] TETPOR AIR contain < 0.25 EU / ml when tested in accordance with the Limulus Amoebocyte Lysate test.

Non-Volatile Extractables (NVE)

Total NVEs extracted in the first 5 litre flush of purified water for a 10" (250 mm) cartridge are <5 mg.

Pharmaceutical Validation

A full validation guide is available upon request from Laboratory Services Group (LSG).

Oxidizable Substances

TETPOR AIR filter cartridges meet current USP and EP quality standards for sterile purified water for oxidizable substances following a <1 litre water flush.

Integrity Test Data

All filters are integrity testable to the following limits when wet with 60 / 40: IPA /water and using air as the test gas.

Ca	artridge	Test Pressure		Diffusional Flow	Wai Intru	sion	Water Intrusion	Water Flow
					Test Pro (barg)

Bag Filters

· mixed media, mesh and felt

Parker domnick hunter's range of bag filters are manufactured from a variety of filter media each specifically chosen for its compatibility with a wide range of process liquids. Parker bag filters are of a fully welded design rather than sewn. No process liquid can bypass through needle holes caused by the sewing process or around a sewn ring. Parker domnick hunter's range of filter bags include:

Standard filter bags

Available in polypropylene, polyester and nylon from 1 to 1000µm.

Extended life bags

Increased thickness of the filter media can increase lifetime by up to 5 times that of a standard bag.

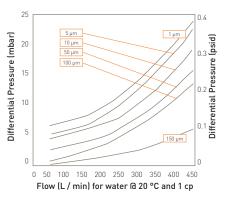

The filtration mechanism employed within filter bags allows high flow rates and high dirt holding capacity, this combined with low maintenance cost and quick change-out makes bag filtration an extremely cost effective means of liquid filtration. Bags are available to suit most common filter housings.

Features and Benefits

- From 1 to 1000 microns
- Low maintenance costs and quick change-out

Performance Characteristics

For double length bags multiply flow rate by 2.1

or triple length by	3.2

Extended Life Bag Filters

PEPLYN PLUS Filters

- liquid filters
- polypropylene

PEPLYN PLUS liquid filter cartridges are utilized for the clarification and prefiltration of a wide range of products in the fermentation and fine chemical industries.

The all polypropylene construction ensures a broad range of chemical compatibility making PEPLYN PLUS cartridges particularly suitable for the filtration of aggressive and viscous chemicals and solvents. They do not suffer from hydrolysis in aggressive solutions which would result in the contamination of the process fluid.

Extensive research has resulted in filter media with continuously graded fibre density giving progressively finer particulate retention through the depth of the media. This combined with optimized media pleating density gives PEPLYN PLUS cartridges exceptional lifetime performance.

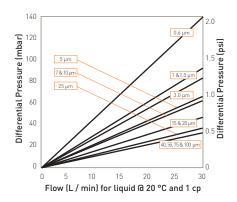

Features and Benefits

- Micron rating range from 0.6 to 100 micron
- Pleated media for high flow rates and long life
- Graded density for excellent particle retention
- Wide range of end caps to provide retrofitting of existing systems
- All polypropylene construction

Note: PEPLYN is a registered trademark of Parker Hannifin Corporation.

PREPOR GF Filters

- liquid filters
- glass microfibre

PREPOR GF liquid filter cartridges are utilized for the clarification of aqueous solutions, media and biologicals.

These filters have a high dirt holding capacity and exhibit exceptional flow performance compared to polypropylene filters. The hydrophilic nature of PREPOR GF filter cartridges also makes them more suitable for gravity fed systems.

PREPOR GF utilizes a glass microfibre filter medium encased within an upstream polypropylene mesh and a downstream non-woven filter support material. PREPOR GF filter cartridges are dimensionally stable with no media migration. The pleat pack is supported by an inner polypropylene core and outer polypropylene cage, heat bonded to polypropylene end caps.

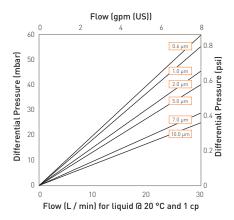

Features and Benefits

- Micron rating range from 0.6 to 10 micron
- Wide range of end caps to allow retrofitting of existing systems
- High filtration area
- High capacity filter media
- Heat bonded construction

Note: PREPOR is a registered trademark of Parker Hannifin Corporation.

PROSTEEL A & N Filters

- liquid filters
- 316L stainless steel

PROSTEEL filters provide the ideal solution in applications where traditional polymer based filters are limited by compatibility, exposure time or a combination of high temperature and viscosity.

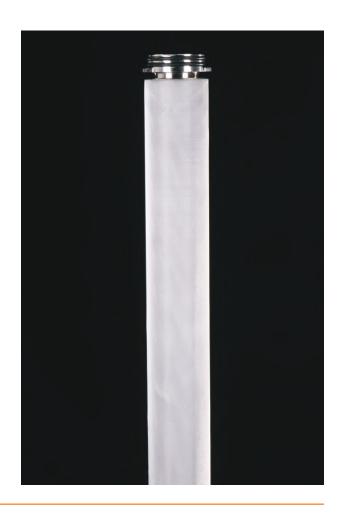

They are ideally suited to filtration of solvents used in a wide range of processes in pharmaceutical production.

The Parker domnick hunter range of stainless steel filters provides the solution to compatibility issues while maintaining excellent flow rates for clarifying duties. The filters are available in two formats, in both absolute and nominal retention ratings and in a pleated or culindrical wrap construction. This allows a cost-effective selection depending on flow rate, retention and dirt holding requirements.

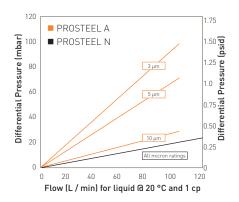

Features and Benefits

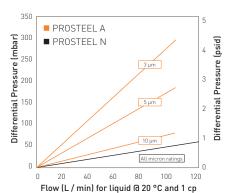

- Absolute and nominally rated stainless steel liquid filters
- Ideal for aggressive solvents, viscous and hot solutions
- PROSTEEL A available in 3, 5 and 10 micron removal ratings
- PROSTEEL N removal rating from 5 to 100 microns

- Compatible with most solvents
- Stainless steel mesh ensures excellent regeneration characteristics for extended service life
- Available in two formats; pleated and wrapped, for complete system optimization

SPUNFLOW QE Filters

- liquid filters
- polypropylene

SPUNFLOW QE are the economical choice for applications where high removal efficiency and low filtration costs are important. Graded density, high porosity, SPUNFLOW QE filter elements are manufactured from thermally bonded polypropylene microfibres. Offering high throughputs, low pressure loss, high dirt holding capacity and long onstream life, the bonded fibre construction minimises any possibility of fibre migration and is rugged enough to resist particle shedding, even under pulse conditions.

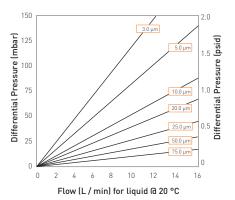

SPUNFLOW QE filters have excellent chemical resistance and contain no surfactants, resins, binders nor adhesives. The fibre matrix has been engineered to provide structural integrity throughout the long service life of the cartridge and finish free construction provides optimum fluid purity and eliminates foaming.

- Thermally bonded polypropylene
- 3 to 75 microns
- High dirt holding capacity
- · High throughputs
- Low pressure loss
- 99% efficiency

PROPOR LR Filters

- liquid filters
- polyethersulphone

PROPOR LR filters have been specifically designed for high flow and effective removal of *Ralstonia pickettii* and other diminutive organisms.

A number of studies have concluded that not all microorganisms are removed by 0.2 micron rated membranes under all conditions. PROPOR LR filters use a 0.1 micron rated membrane, which can remove diminutive organisms, while maintaining flow rates typical of a 0.2 micron filtration system.

Ralstonia pickettii is one organism that has frequently been shown to penetrate a 0.2 micron rated membrane and is a common contaminant in purified water systems. PROPOR LR filters have been validated directly against the removal of Ralstonia pickettii.

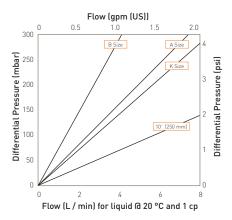

Features and Benefits

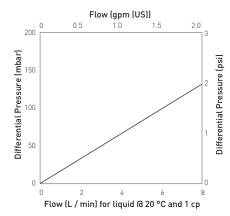

- Fully correlated against Ralstonia pickettii and integrity testable
- Increases retention efficiency whilst maintaining existing 0.2 micron rated system size
- Up to 2.5 times higher flow rate than competitive 0.1 micron rated filters
- MURUS and DEMICAPs can be gamma-irradiated and autoclaved

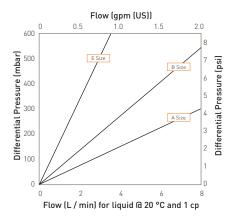

Note: PROPOR and DEMICAP are registered trademarks of Parker Hannifin Corporation.

Sterilization

PROPOR LR filter cartridges can be sanitized with hot water at up to 90 °C (194 °F) and are compatible with a wide range of chemicals.

For detailed operational procedures and advice on cleaning and sterilization, please contact the Technical Support Group through your usual Parker domnick hunter contact.

Biological Safety

Materials conform to the relevant requirements of 21CFR Part 177 and current USP Plastics Class VI - 121 °C and ISO10993 equivalents.

Quality Standards

Pharmaceutical grade products are manufactured in accordance with cGMP, 100% flushed with pharmaceutical grade purified water and integrity tested prior to despatch. A sample of each lot is tested to demonstrate conformity to validated claims.

Gamma-Irradiation

PROPOR LR MURUS & DEMICAP disposable filters can be gamma-irradiated up to a maximum dosage of 40 kGy.

Performance Characteristics

TOC / Conductivity

The filtrate quality from a 10" (250 mm) PROPOR LR conforms to the requirements of current USP <643> (TOC) and USP <645> (conductivity) within the first 200 ml flush of purified water.

Endotoxins

Aqueous extracts from the 10" [250 mm] PROPOR LR contain < 0.25 EU / ml when tested in accordance with the Limulus Amoebocyte Lysate test.

Non-Volatile Extractables (NVE)

Total NVEs extracted in the first 5 litre flush of purified water for a 10" (250 mm) cartridge are <10 mg.

Total NVEs extracted in the first 5 litre flush of purified water for an A size 7.9" (200 mm) DEMICAP capsule are <5 mg.

Pharmaceutical Validation

A full validation guide is available upon request from Laboratory Services Group (LSG).

Oxidizable Substances

PROPOR LR filter cartridges meet current USP and EP quality standards for sterile purified water for oxidizable substances following a <1 litre water flush.

Integrity Test Data

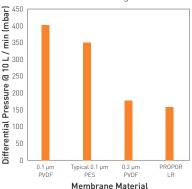

All filters are integrity testable to the following limits when wet with water (diffusional flow) and 60 / 40: IPA / Water (bubble point) using air as the test gas.

Micron Rating		0.1

TETPOR LIQUID Filters

- liquid filters
- PTFE

TETPOR LIQUID filters are particularly suitable for sterilization and particulate removal from aggressive chemicals (including acids, bases and solvents) within a wide range of critical processing industries.

The superior performance, strength and durability of TETPOR LIQUID filters stems from the use of a single layer, high security PTFE membrane, which has a high dirt holding capacity due to its high voids volume. This results in low pressure drops and long service life.

High flow rates are achieved due to the optimized pleat pack density and the superior design construction of TETPOR LIQUID filters.

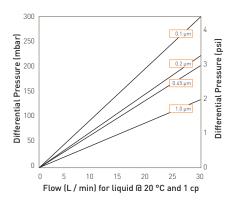

Features and Benefits

- Superior chemical resistance of PTFE membrane combined with polypropylene hardware
- Integrity tested prior to despatch
- Validated to current ASTM F838 methodology
- Comprehensive range of end cap configurations for retrofitting

Note: TETPOR is a registered trademark of Parker Hannifin Corporation.

TETPOR PLUS Filters

- liquid filters
- polytetrafluoroethylene

TETPOR PLUS filters are manufactured entirely from fluoropolymers making them extremely resistant to a wide range of aggressive chemicals.

TETPOR PLUS filter cartridges have been specifically designed for the filtration of liquids and gases in the bulk pharmaceutical, chemical and biopharmaceutical industry where particulate removal, bioburden reduction and guaranteed sterility is required.

The increasing use of ozonation for the treatment of WFI systems has highlighted compatibility issues with vent filters based on standard polypropylene components. The introduction of a fully validated 0.2 micron sterilizing grade TETPOR PLUS filter cartridge provides guaranteed long term performance in these applications with the additional benefit that the filters integrity can be validated by the water intrusion test method.

The high voids volume single layer PTFE membrane ensures an excellent combination of flow rate and retention.

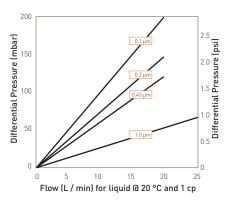

Features and Benefits

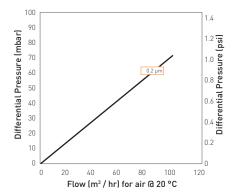

- Sterile filtration of oxygen / oxygen enriched feeds in cell culture
- Exceptional resistance to solvents and oxidative environments
- Ideal for sterile venting on ozonated water systems
- Fully validated to ASTM F838 for sterilizing grade filters
- PTFE membrane
- Available in a wide range of micron ratings to suit all applications

Note: TETPOR is a registered trademark of Parker Hannifin Corporation.

Performance Characteristics

10" Size (250 mm) Cartridge

10" Size (250 mm) Cartridge

Integrity Test Data

The following is the integrity test information for the micron ratings available within the TETPOR PLUS product range. Diffusional flow and bubble point values are given for cartridges wetted in 60:40 v/v IPA:Water solution.

Micron Rating		0.1	0.2	0.45	1.0
Diffusional Flow	(barg)	1.45	0.8	0.45	3.0
Test Pressure	(psig)	19.0	11.6	0.5	0.2
Max. Diffusional Fl	ow (10")	35.0	16.5	50.0	-
(ml / min)	(K)	16.3	7.7	23.3	-
Min. Bubble Point	(barg)	1.45	1.0	0.48	3.0
	(psig)	19.0	15.0	0.5	0.2
Water Intrusion	(barg)	-	2.5	-	-
Test Pressure	(psig)	-	36.3	-	-
Max. Water Intrusio	on (10")	-	13.5	-	-
(ml / 10 min)	(K)	-	6.4	-	-

Pharmaceutical Validation

0.2µm sterilizing grade version is supported by a full validation guide, available upon request from Laboratory Services Group (LSG).

 PFA
 PFA

Biological Safety

Materials conform to the relevant requirements of current USP Plastics Class VI - 121 °C and ISO10993 equivalents.

Recommended Operating Conditions

Up to 125 °C (257 °F) continuous operating temperature and higher short-term temperatures during CIP to the following limits:

1	Temp	erature	Max. Forward dP					
			(bar)	(psi)				
	20	68	5.5	80.0				
	75	167	3.8	55.0				
	125	257	2.0	30.0				

Effective Filtration Area (EFA)

10" (250 mm) Up to 0.63 m² (6.78 ft²) K Size (125 mm) Up to 0.32 m² (3.44 ft²)

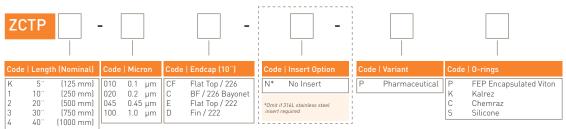

Cleaning and Sterilization

TETPOR PLUS cartridges can be repeatedly steam sterilized in situ or autoclaved at up to 142 °C (287.6 °F) for a maximum of 30 cycles.

Retention Characteristics

TETPOR PLUS filter cartridges are validated by bacterial challenge testing with *Brevundimonas diminuta* to current ASTM F838 methodology (10⁷ organisms / cm² EFA minimum) with typical in-house challenge levels being 10¹¹ organisms per 10" (250 mm) module.

Ordering Information

STEAM Filters

- steam filters
- 316L stainless steel

High quality steam for sterilization and heating purposes is a key element of many pharmaceutical manufacturing systems, ensuring effective and continuous operation of the process.

Parker domnick hunter STEAM filters are designed to provide high quality particulate removal in process steam (available with compliance to 3A Standard 609-03) together with high flow rates and dirt-holding capacity, thereby allowing long system lifetime and cost-effective operation.

Features and Benefits

- 316L stainless steel filter cartridges
- Exceptionally high flow rates
- Available in compliance with 3A Standard 609-03 (culinary grade) 1 micron
- High dirt holding capacity
- 'JUMBO' filter configuration ensures maximum utilization of pipework capacity

Which Filter for Which Application?

- . Direct from boiler
- No direct contact with product being manufactured

- · General heating
- · Steam jackets
- Bio waste kill systems

- Required if steam is used to sterilize liquid and gas cartridge filters
- Selection dependant on flow parameters

Pleated 5 µm (Selection Criteria)

Culinary Steam (3A Standard 609-03)

- 95% retention of >2 micron particles in the liquid
- Manufactured from 300 series stainless steel
- Any additives to the boiler feed should conform to CFR Title 21, Chapter 1, Part 173, Section 173.310

- Used in direct contact with food
- Direct contact with food processing equipment and HVAC systems

• Selection dependant on flow parameters

Sintered 1 µm (Selection Criteria)

JUMB0 Filters

• Condensate to WFI standards

- Pharmaceutical products
- Pharmaceutical plant HVAC systems

• For removal of magnetite particles generated from stainless steel pipes due to corrosive purity of steam

HIGH FLOW TETPOR II (Selection Criteria)

Culinary 1µm (Selection Criteria)

 Clamps: 304 Stainless Steel

Standard Surface Finish

■ Internal: As welded

Pickled and Passivated

■ External: Polished 0.8 µm Ra (32 µln Ra)

Sanitary Finish

■ Internal: Polished 0.4 µm Ra (16 µln Ra)
■ External: Polished 0.25 µm Ra (10 µln Ra)

Sanitary Electropolished Finish

■ Internal: Polished 0.4 µm Ra (16 µln Ra)

and Electropolished

■ External: Polished 0.25 µm Ra (10 µln Ra)

Welding

All assembly welds are full penetration. All welds are crevice and undercut free. Weld finish and detail drawings available upon request.

Certification

Supplied as standard with vessel inspection certificate

Material Test Certification

EN10204 3.1 supplied upon request.

Recommended Operation Guidelines Sizing

Sizing vent vessels particulary for vacuum sensitive tanks can require specialist advice. It is important that VENT housings are sized on maximum gas flow capacity under actual operation conditions.

Vacuum Protection

Where a tank is vacuum sensitive, there is a risk of tank collapse. In such cases the fitting of an appropriately rated bursting disc (or similar) and, if necessary a pressure relief valve, is

lor similar) and, if necessary a pressure relief valve, is highly recommended.

Approvals

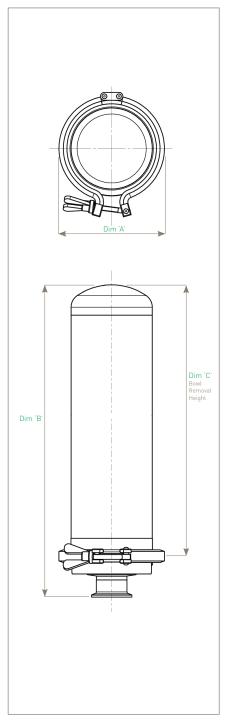

EAC 010-2011, (No. TC N RU D-GB. AU01.B.00511) Approval type: Import Certificate, TRCU Pressure Equipment (available on request)

HCA Enhanced Plus Filter Housing

• Alloy 22 gas housings

- Flow efficient range of gas housings
- Single element housing
- Designed to maximize flow and minimize pressure drop
- Designed specifically for aggressive gases and solvents
- Suitable for cartridge type 226, K to 30"
- Wetted parts Alloy 22
 - Non wetted parts 304 and 316 stainless steel
- ATEX Compliance available

Specification

Materials of Construction

■ Housing: Alloy 22

Seals: (Stainless Steel non-wetted parts)

■ Seals: PTFE, EPDM, Silicone or
Viton™(FKM(All FDA)

■ Vent / Drain Seals: PTFE (BSP Only)

Surface Finish

Internal: Polished 0.8 µm Ra
 External: Polished 0.8 µm Ra
 All finishes pickled & passivated.

Welding

All assembly welds are full penetration. All welds are crevice and undercut free. Weld finish & detail drawings available upon request.

Certification

Supplied as standard with vessel inspection certificate.

Material Test Certification

EN10204 3.1 supplied upon request.

Directives

Housings designed in accordance with the European Council Pressure Equipment Directive (PED).
ATEX (where applicable).

Design Basis

ASME VIII Division 1.

Approvals

EAC 010-2011, (No. TC N RU D-GB. AU01.B.00511) Approval type: Import Certificate, TR CU Pressure Equipment (available on request)

Accessories

Adjustable legs.

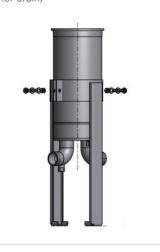

Accessory Kit

3 round 639504203 (XLGSS12IL1)

5 and 7 round 639504204 (XLGSS12IL2)

8 and 10 round 639504205 (XLGSS13IL1)

Adjustable legs giving centre to floor height adjustment between 50 and 375 mm for 3,5 and 7 round and 50-300 mm for 8 and 10 round. (clearance required for drain)

Fixed legs.

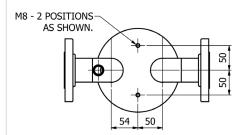

Accessory Kit 3, 5 and 7 round only 639504206 (XLGSS12IL3)

Fixed base support for M8 mounting studs giving centre to floor height of 230 mm. Vessel to be properly supported on the pipework as close as possible to the inlet/outlet.

Customer mounting, 3, 5 & 7 round only.

Two M8 mounting studs are provided as shown to allow the customer to custom mount the housing as they require, alternatively we provide accessories shown.

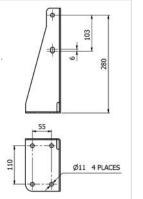

Note A Gap available for 50 mm (2 in) wide support.

Wall mounting, 3, 5 & 7 round only.

Accessory Kit - 639504207 (XMBSS12IL1) Wall mounting bracket. Customer to ensure wall strength and if necessary provide a backing plate.

TURBOSEP is a key part of Parker domnick hunter's filtration solutions for fermentation applications.

Specifically designed for the removal of foam aggregate and aerosol from fermenter off-gas, TURBOSEP improves the overall efficiency of the fermentation process and facilitates the effective operation of final sterilizing grade filters.

This highly efficient mechanical separator has no moving parts and very low pressure drop. Foam, aerosol and entrained liquid removal from the off-gas are returned to the fermenter housing thereby minimizing product loss.

TURBOSEP is a patented product of Parker domnick hunter.

Features and Benefits

- Highly efficient separation of liquid and foam from off-gas
- Increases fermenter capacity by up to 30%
- Protection of off-gas filters for extended life
- Reduction in antifoam usage of up to 70%
- Continuous operation of the fermenter throughout the foaming process
- Improved downstream processing efficiency through reduced antifoam consumption
- ASME Code Certification available

TURBOSEP

mechanical separator off-gas filtration

Note: TURBOSEP is a registered trademark of Parker domnick hunter

Specification

Materials of Construction

■ TURBOSEP 304L or 316L Stainless Steel

Seals: EPDM (FDA)

Standard Surface Finish

Internal: Linished to 0.8 µm Ra
 External: Bead Blast to 0.5 µm Ra

Welding

All assembly welds are full penetration. All welds are crevice and undercut free. Weld finish & detail drawings available upon request.

Design Conditions

- Maximum Allowable Working Pressure (MAWP): 3 Barg (43.5 psig)
- Maximum Allowable Working Temperature (MAWT): 149°C (300 °F)

Directives

Housings designed in accordance with the European Council Pressure Equipment Directive (PED).
ATEX (where applicable).

Design Basis

ASME VIII Division 1.
ASME Code Stamp Option available

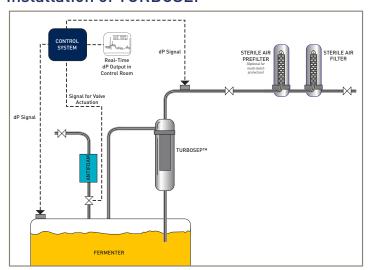

Approvals

EAC 032-2013, (No. RU C-GB.AM01.B.00094) Approval type: Import Certificate, TRCU Pressure Equipment (available on request)

Installation of TURBOSEP

Typical Installation

When off-gas exits the fermenter it enters the TURBOSEP unit. Fixed turbine blades spin the incoming air forcing foam and liquid to the outer walls

The off-gas then flows across a specially designed impingement plate and spirals down the wall of the TURBOSEP. The off-gas is now free of foam and entrained liquid and exits the TURBOSEP.

Applications

TURBOSEP can be employed in any fermentation application where the creation of foam is causing process control problems. This includes:

- Healthcare products (e.g. penicillin, cephalosporin)
- Food and feed additives (e.g. lysine, M.S.G.)
- Organic chemicals (e.g. citric acid)
- Enzymes (e.g. proteases, carbohydrases)

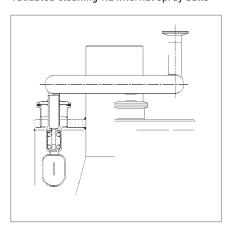

Process Optimization

When employed with a differential pressure monitoring unit, TURBOSEP optimizes the fermentation process by utilizing off-gas separation and antifoam injection.

When foam-over occurs, foam and liquid entering the TURBOSEP cause an increase in the differential pressure monitoring unit which triggers the controlled release of antifoam, at a predetermined level of foam-over, into the fermenter.

This process control system has proven to substantially reduce the levels of antifoam required to control foam-over and has led to fermenter capacity being increased in many applications.

Validated cleaning via internal spray balls

Ordering Information

TURBOSEP sizing is normally based upon the completion of a TURBOSEP questionnaire available from Parker domnick hunter. Below we give an indication of the product range based on the typical gas flow (actual rather than normalized) through the fermenter. Each TURBOSEP is tailor made to its application to ensure maximum effectiveness in operation and overcome critical issues with respect to installation.

Typical Proce (A l / min)	ss Flow Rate (Acfm)	TURBOSEP Code	Pipe Connection *1

^{*1} Other connections styles available upon request.

Tri-Clamp® is a registered trademark of Alfa-Laval, Inc. Note: All Tri-Clamp® Connections conform to BS4825 Pt.3

^{*2} Pipe size is nominal bore. Connection style options include flange variants.

The VALAIRDATA 3 is the next generation of fully automated, aerosol challenge integrity test unit, designed to test the integrity of sterile gas filters quickly and easily.

The VALAIRDATA 3 aerosol challenge test is fully correlated to aerosolized *B.diminuta*, *B.subtilis* and *Enterobacteria phage MS2* challenges and is a recommended test methodology in the "PDA's Sterilizing Filtration of Gas – Technical Report #40".

The unit utilizes Parker domnick hunter's 40 year experience in the provision of world leading sterile gas solutions by further improving the usability and sensitivity of the test process and offers significant savings in operator time.

Features

- 5.7" TFT LCD touch screen operation
- Multi-language menu availability
- Testing correlated to aerosol and viral challenges
- Developed to GAMP 5 guidelines
- Transfer of data via USB data stick
- 4GB internal memory storage

Note: VALAIRDATA is a registered trademark of Parker domnick hunter

No unit specific PC software required

Physical Parameters

■ Languages: English, German,

French, Swedish, Spanish, Italian, Portuguese & Danish 363mm x 155mm x 308mm

■ Weight: 8 Kg

■ Instrument size:

■ Power supply: 3.2V / 16Ah & Mains

100-240 VAC : 50 / 60 Hz

Inlet pressure required: 4.5 – 7 barg
 Pneumatic connections: Rectus 21 KA series
 Aerosol generation time: 5-600 seconds

Benefits

Easy to use
Portable for in-situ teting around the facility
Quick determination of filter's ability to sterilize gas - 30 second time for 10" housing, 5 seconds for discs
Increased sensitivity compared to liquid based tests, especially on multi-cartridge systems

Ordering Information

Porecheck 4 Integrity Test Unit

 water intrusion, pressure decay and bubble point testing

The Porecheck 4 is configured for water intrusion testing, pressure decay and bubble point testing. The Porecheck 4 comes in two versions:

'P' Pharmaceutical (CFR) - Allows traceability and audit tracking capability

'C' Certified - comes with password level protection

This market leading system incorporates a range of design features unique to the Porecheck 4 bringing true portability, enhanced ease of use, flexibility and reliability in challenging environments. All this within an instrument fully compliant with 21 CFR Part II.

Features and Benefits

- Designed to 21 CFR Part II and Annex II compliant environments
- Automatic compensation when used on housings located 10 metres above instrument
- Maintains resolution and accuracy regardless of filter system size 0.1 to 32 litres
- Highly portable and mains independent

- Configurable to automatically flush and drain filters
- Robust waterproof stainless steel casing
- Direct attachment to test disposable capsules
- 100 storable test programs defined in blocks

Note: Porecheck is a registered trademark of Parker Hannifin Corporation.

The chemicals are arranged in alphabetical order using their most common or trade names. If the chemical in question does not appear to be listed, it may be found elsewhere in the table under a pseudonym, in particular its IUPAC¹¹ name.

With regard to compatibility:

- Any product that has Limited Compatibility (LC) at ambient temperatures should not be used at a higher temperature.
- The list of compatibilities does not take into account any synergistic effects of more than one chemical present in the solution to be filtered.
- Test Conditions 72 hours at ambient temperature and pressure, unless otherwise stated.
- Contact Parker domnick hunter for confirmation of compatibility with specific operating conditions.

Δ

Absolute pressure

Associated with gas systems. The absolute pressure is the total pressure exerted on a system equal to atmospheric pressure plus gauge pressure, for example 2 barg = 3 bar absolute.

Absolute rating

A definitive value given to a filter that represents the smallest particle size capable of being captured by the filter. Typically it refers to 100% retention at a particular micron rating. The assigning of micron ratings is however dependant on the test methodology used. e.g.: a sterile grade absolute rated liquid filter is assigned a 0.2 micron rating if it retains all microorganisms of a predetermined size it does not mean that the filter has 0.2 micron pores. When selecting a filter for a particular application always refer to the methods and assumptions made for assigning the micron rating.

Air flow

A measure of the amount of air that flows through a filter at a certain system pressure and pressure drop. This is typically expressed in normalized units i.e.: the relative flow rate at atmospheric pressure and is quoted for a clean unused filter. Always quote system pressures when sizing gas filters.

Aerosol integrity testing

A method specifically designed for sterile gas filters whereby aerosol in the most penetrating particle size (MPPS: 0.2–0.3 micron) is used as a non-destructive challenge to the filter to determine whether it is providing sterile gas. The test can be performed using an automated test instrument such as the Parker domnick hunter VALAIRDATA II.

Autoclave

A closed pressure vessel into which steam is introduced (typically at a temperature of 121 - 134 °C (250 - 273 °F)) to sterilise the contents.

В

Backwash

A reverse flow of liquid through a filter in order to flush out trapped solids.

Bacterial challenge

This refers to a live bacterial challenge of a filter in either the liquid or gas phase. The type of organism used for the test depends on the assigned micron rating of the filter. For example a 0.2 micron sterile grade liquid filter is challenged with the organism *Brevundimonas diminuta* (test method ASTM 838-05) while a 0.45 micron absolute rated liquid filter is challenged with a suspension of *Serratia marcesens*. In some cases for critical performance validation requirements it will be necessary to challenge the filter with bacteria in the actual process fluid being filtered.

Beta rating

A measure of a filter's efficiency based on the number of particles present in the influent (upstream) to those in the effluent (downstream). Efficiency is expressed as a BETA ratio and is calculated as follows:

Beta Ratio = Number of particles in the influent

Number of particles in the effluent

Generally a Beta Ratio at 5000 is accepted by the industry as being an 'absolute' rating for media prefilters.

C

Cartridge or filter cartridge

A filtration or separation device usually supplied in a cylindrical format which locates easily and quickly into a filter housing.

Chemical compatibility

When selecting filter materials attention needs to be given to their compatibility to the fluid which is to be filtered. A filter (depending on application) needs to be assessed for reduction in performance in terms of material degradation, integrity, etc. as well as quantifying any extractables levels. It should be noted that the compatibility of a filter is dependent on the process conditions. General material compatibility databases assume limited temperature and exposure time. They also refer to just one chemical. In an actual process there could be a combination of chemicals, high differential pressure and high temperature which all could influence filter performance. General guidance on filter performance can be given from experience and in-house data but normally it is recommended that filter compatibility is tested in the process conditions.

Clarification

This is the selective removal of particulate from a process fluid usually achieved through depth filtration. The degree of clarification is dependant on customer specification.

Colony forming unit (CFU)

The minimum number of cells on an agar plate which will give rise to a visible colony. This term is most commonly seen in the validation of sterile filters to a live bacterial challenge where the challenge and the number of organisms recovered is stated in CFU.

Coalescing

When small droplets of aerosolized liquid merge together to form larger droplets. This normally occurs in a depth filter as the process gas carrying the entrained liquid droplets passes through the filtration media. A coalescing filter such as the Parker domnick hunter OIL-X also flows from the inside of the cartridge to the outside so any coalesced liquid drains to the base of the filter and subsequently into the bottom of the filter housing.

Colloid

Colloids are molecules that have not coagulated together to form a precipitate but remain in liquid suspension. These molecules are very small in size and have a molecular charge that affects their affinity for other molecules and materials. The choice of filter type and design is of paramount importance for a colloidal system if premature blockage is to be avoided.

Compaction

This can occur to a filtration medium when it is subjected to high differential pressures. The high forces on the filtration media (especially depth type) can lead to compression of the structure and subsequent changes in filtration characteristics.

Concentrate

The retained non filtered stream from a crossflow filter system.

Cross flow filtration

A filter characterized by the feed stream travelling parallel to instead of directly through the filtration medium. This has the advantage of minimizing the blockage of the membrane as the system is to some extent 'self cleaning'.

D

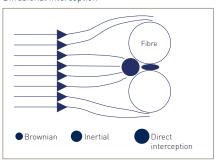

Dead leg

An area of pipework where there is potentially no flow and therefore stagnant conditions exists. It is extremely important to eliminate these if contamination issues are to be minimized.

Depth filter

A depth filter is characterised by the thickness of the filtration media as well as its structure. A depth filter is normally fibrous in nature and contaminant is retained through the depth of the filtration media rather than just the surface.

Diffusional interception

This is the dominant removal mechanism for the smallest particles captured by a filter in the gas phase. Particles as small as 0.01 μm exhibit great diffusional movement (Brownian Motion) which has the effect of increasing its nominal mean diameter to the filter. The efficiency of this capture mechanism decreases as the particle size increases.

Diffusional flow

A non-destructive integrity test method for membrane based filters. It involves wetting out every pore in the membrane structure with water or the process fluid or a low surface tension liquid in case of hydrophobic membrane. Compressed air is applied to the upstream side of the filter and gas diffuses through the wetted pores. This flow rate is either measured directly by mass flow meters or indirectly via measuring the drop in pressure on the upstream side of the filter.

Differential pressure

Differential pressure (dP) is the difference in the pressure measured upstream (influent) and downstream (effluent) of a filter. Particularly in liquid applications differential pressure will increase to a point where either filter damage or insufficient flow will result. The higher the differential pressure the higher the energy cost so it is important to balance the pressure drop requirements with the installation size and required lifetime to blockage. Units of measurement are bar and psi as opposed to barg and psig.

F

Effective filtration area (EFA)

This is the area of filtration material available for filtration.

Effluent

The fluid which has passed through a filter.

Extractables

When a filter is in contact with the process fluid, chemical components may leach from the materials of construction and deposited in the filtrate. The levels of non-volatile extractables for a limited number of fluids are quoted in the filter validation guide. The level of extractables is dependent on the process conditions. Filtration of solvents, high temperature fluids and steam sterilization are three areas where extractables can increase.

F

Filter (noun) / filter cartridge / cartridge

An apparatus which performs filtration.

Filter (verb)

To pass a fluid or gas through a porous medium in order to remove solid particles.

Filter efficiency

Filter efficiency is a measure of the percentage of particles that are removed from the fluid by the filter. Typically these are given in terms of the % removal for a certain size of particle. A filter efficiency may also be given across a range of particle sizes . For a number of gas applications the efficiency of a filter may be quoted in relation to the filters ability to remove particles at the most penetrating particle size (MPPS) of 0.2-0.3 micron. Always ensure filter efficiency is matched to the requirements of the process.

Filterability indices (FI) and Vmax

This is an indication of a filters capacity to process certain fluids. It generally gives a measure of the rate of blockage of a filter as well as the theoretical maximum throughput. The time required to flow two consecutive 200 ml fluid samples is recorded and the filterability indices are calculated from the results. The two formulae used are as follows:

$$(Vmax) = \frac{400 + 400T}{(T_2 - 2T_1)}$$

 $FI = [T_2 - 2T_1]$

 T_1 = Time to filter first 200 ml

 T_2 = Time to filter second 200 ml

It should be noted that these methods give a general indication of performance and are often more useful in comparative performance measurement between different filter types.

Filtrate

Another name for effluent.

Filter sterilization

Sterilization is the act of making an organism barren or infertile (unable to reproduce). The sterilization of a filter can be achieved by a number of methods including dry heat, steam, ethylene oxide, hydrogen peroxide or irradiation. The method chosen depends on the process and

the materials of construction of the filter but by far the most widely used is that of steam, either in an autoclave or via steam-in-place (SIP).

Flux

The rate of fluid flow (gas or liquid) when expressed in terms of flow per unit area of the filter that removes the contaminants from the fluid stream. It can apply to both depth and membrane media.

G

Gauge pressure

The pressure of a system measured by a gauge, which excludes atmospheric pressure, for example 1 bar atmosphere (or 1 bar absolute) = 0 barg.

H

Housing

An enclosure for a filter element, typically rated for pressure, that directs the fluid through the filter.

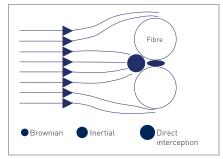

Hydrophilic

Hydrophilicity is the ability of a filtration media to 'wet out', that is, for the porous structure to be completed filled with the liquid being filtered. This is an important characteristic as incomplete wetting of the structure can lead to a reduction in flow capacity and problems with integrity testing. All liquid filters are 'hydrophilic' apart from those that may have been selected for use with aggressive solvents. These filters are typically based on a fluoropolymer and their structure needs to be wetted with a low surface tension liquid such as isopropyl alcohol. Once the structure has been wet, the filter will process aqueous solutions without a problem.

ı

Inertial impaction

This is a removal mechanism for particles captured by a filter in the gas phase. The particles follow the streamlines of gas between the filter fibres and membrane pores. Due to their mass the inertia of the particle will cause it to move out of the streamline and attach itself to a fibre or pore wall. The effect of this capture mechanism increases with particle size / mass.

Influent

The fluid entering the filter system.

In vitro

In an unnatural position e.g. outside the body "In vitro" is Latin for "in glass" an experiment performed without the involvement of a whole, living organism.

In vivo

The testing of a substance or experimentation in or using a living, whole organism.

L

Log reduction value (LRV)

This is a measurement of a filters removal efficiency for a specific contaminant. It is normally associated with the bacterial retention of a filter. The LRV is:

Log₁₀ Number of bacteria in the influent
Number of bacteria in the effluent

e.g.
$$\left(Log_{10} \frac{1 \times 10^{10}}{1} \right) = LRV \text{ of } > 10$$

It is always expressed as > (greater than) as 1 has to be used for the effluent even if there are no organisms present. This can also be expressed as a 10 log reduction or a titre reduction of 10^{10} .

M

Medium (Media)

This is the component of the filter that removes the contaminants from the fluid stream. Also commonly referring to depth - type materials, in its more generic sense a filter medium / media can refer to either depth or membrane filter materials.

Microfiltration

Microfiltration is the process of removing particles from a liquid or gas by passing it through a porous medium. It generally involves removing particles between the sizes of 10 and 0.04 micron in liquids, and down to 0.01 micron in gases.

Micron (micrometer)

Designated by the Greek letter μ a micron is 10° ³mm (millimeters) or 10^{4} (Angstroms) or 0.00003937 inch. For a perspective on this size a human hair is approximately 70 microns thick and the limit of resolution of the naked eye is around 40 microns.

Membrane

A membrane is a thin, porous film typically between 30 and 150 micron in thickness. It has of tens of millions of pores / cm² through which the process fluid runs. The nature of the pore structure is determined by the manufacturing method.

Solvent cast membranes such as Polyethersulphone (PES) and Mixed Esters of Cellulose (MEC) have a defined pore structure which can be asymmetric whilst membrane such as Polytetrafluoroethylene (PTFE) which is manufactured by 'stretching' have a fibrous appearance and a less defined pore structure.

Nanofiltration

Filtration that removes both particles and small dissolved molecules and ions. Finer than ultrafiltration, not as fine as Reverse Osmosis.

Nanometer

A nanometer is 10-9 meters

Nominal filter rating

This rating is often quoted within the filtration industry but great care should be taken in ensuring the efficiency and test methodologies are completely understood. A 5 micron nominal filter could be 99% retentive at 5 micron, another could be 80%. It can be very misleading to compare the performance of filters on nominal ratings. When selecting a filter the duty required should be

compared to the individual performance characteristics of filter. Parker domnick hunter has the experience to help select the most appropriate filter for the application.

0

Oleophobic

Oleophobic membranes and depth media have the capability to repel fluids such as oil and lubricants. This phenomena is used in some of the new generation oil coalescing filters.

Oxidation

This refers to the degradation of materials in the presence of oxygen and high temperature. It is normally associated with high temperature gas systems where the combination of steam sterilization can lead to the onset of oxidation of polypropylene filtration components in as little as 3 months. For applications where continuous (1 year and above) exposure to high temperature is required the use of a special product with oxidation resistant filtration support materials such as the HIGH FLOW TETPOR H.T. is recommended.

Oxidation can also occur on filters used in ozonated water systems. In these instances careful selection of filter components is required.

P

Pleating

Filtration media can be pleated or corregated to maximize the filtration area. By pleating filtration media it is possible to fit a large EFA in a relatively small cartridge volume.

Voids volume (porosity)

This is a measurement of the free space in a filtration media. The more free space the less the resistance to flow. Typical values for a membrane are in the region of 50-80% and for depth type media between 60-95%.

Pressure decay

A non-destructive integrity test method for membrane based filters. It involves wetting out every pore in the membrane structure with water or the process fluid or a low surface tension liquid in case of hydrophobic membrane. Compressed air is applied to the upstream side of the filter and gas diffuses through the wetted pores. This causes a pressure drop in the upstream side of the filter known as the pressure decay. The maximum allowable pressure decay for a filter is dependant on the upstream volume and therefore must be known.

Pressure Decay (mbar /min) =

Diffusional Flow (ml / min)
Upstream Vol (l)

Pyrogenicity

Pyrogenicity is the tendency of a substance to raise body temperature when injected into the body. Filtration materials that come in contact with injectable liquids must meet pyrogenicity standards and be classified as non-pyrogenic. Pyrogenicity can be determined by such standard tests as the Limulus Amoebocyte Lysate (LAL) test.

Permeate

Synonymous with filtrate.

R

Regeneration

When a filter becomes blocked with protein based material it may be possible to regenerate, or clean the filter, so improving overall lifetime.

Reverse jetting

The application of high pressure compressed gas to the inside of a filter to release powder collected on its surface.

Reverse osmosis

Forcing a liquid through a non-porous membrane, removing particles, along with dissolved molecules and ions. Reverse osmosis is the finest form of membrane separation and is used to desalinate water for drinking, and in the preparation of ultrapure water for various industries.

S

Sanitization

Reduction not elimination of a microbial population to render a fluid/system free from spoilage organisms and increase shelf-life of products.

Sedimentation

The process by which suspended solid particles in a liquid phase gravitate downwards. Eventually they will settle on the bottom of the holding tank, pipework etc. The rate of sedimentation is governed by particle mass and fluid velocity.

Separation

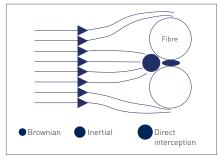

Separation is the process of dividing a fluid stream (either liquid or gas) into separate components. This can include separation of two phases (liquid from gas), separation of soluble impurities (known as purification) or solids from a fluid (filtration). The products of a separation can themselves be separated further in many cases.

Silt density index (SDI)

This is another measure of the rate of blockage and is typically used when the system is relatively clean and the difference between $T_{\rm 400}$ and $T_{\rm 200}$ (see Filterability Indices) is so small that large inaccuracies can occur. The SDI uses the time taken for two 500 ml samples of fluid to pass though a 47 mm diameter 0.45 μm disc. There is typically a 15 minute gap between the two samples being taken.

Size exclusion

This is a removal mechanism for particles captured by a filter in either the liquid or gas phase. It applies to particles that are physically too large to pass through the filter structure. The mechanism is not affected by flow rate unless pressure drops cause deformation of the particle.

Solute

A solid which is dissolved in a solvent. For instance, the salt in salt water is a solute.

Solvent

A liquid substance capable of dissolving other substances. The solvent does not change its state in forming a solution.

Stabilization

This is the reduction in microbial loading in a fluid system and is generally associated with the beverage industry where partial rather than complete removal of spoilage organisms may be required to extend shelf-life.

Sterilization

In terms of filtration this means the elimination of all living microorganisms from the influent stream.

Surfactant

Acronym for a surface active agent. In filtration it is also sometimes called a wetting agent. If a filter is being used to filter aqueous solutions and incomplete wetting of the membrane pore structure is encountered a 'wetting agent' may be added to the membrane surface by flowing a quantity of surfactant through the filter. However, the use of a wetting agent is not desirable, especially in a pharmaceutical environment, as there is also the possibility of the surfactant leaching from the filter into the filtrate during processing or steam sterilization, etc.

ı

Thermal stability

This is most important during sterilization of the filter. The majority of cartridge and disposable type filters are manufactured from polymers such as polypropylene and nylon. During sterilization the components of the filter expand and contract putting great strain on the device. The filter performance with respect to steam sterilization should be matched closely to the requirements of the process. It should be noted that some filter configurations cannot be in-situ steam sterilized but can only be autoclaved.

Titre reduction

See LRV.

Turbidity

This is a measurement of the amount of suspended particles in a fluid and is effectively a clarity index. It is measured in NTU (Nephelometric Turbidity Units).

U

Unloading

The release of contaminants which had initially been captured by a filter. This is most likely to occur in filtration systems with are subjected to high pressure pulses such as high capacity filling lines.

Ultrafiltration

Filtration of a liquid that separates suspended or dissolved substances based on their molecular weight or size. Ultrafiltration generally refers to separating everything larger than a large molecule. Compare to microfiltration, nanofiltration, reverse osmosis.

Viscosity

Viscosity is a measurement of the resistance to flow of a fluid. The more viscous the fluid, the greater the time required to filter. Viscosity will in general reduce with an increase in temperature. This is why very viscous solutions such as glucose are heated prior to filtration.

Vmax

See Filterability Indices.

W

Water flow

Measure of the amount of water that flows through a filter. Related to the degree of contamination, differential pressure, total porosity, and filter area [ASTM:F317-72]. Expressed in the membrane industry in units of millilitres / minute / square centimetre.

Water Intrusion

A non-destructive integrity test method specifically designed for hydrophobic filters. It involves filling the upstream volume of a filter housing with water and applying a pressure, typically in the order 2.5 barg. As the membrane is hydrophobic the bulk water will not pass through. However, due to the difference in pressure between the upstream and downstream side of the filter there is a net loss of water from the upstream side due to evaporation and the slight penetration of water into the pore structure. This loss of water results in a pressure drop which is displayed as either a water intrusion value or a water flow value. The water intrusion is the measure of the increase in compressible gas volume expressed at atmospheric pressure and the water flow equates to the volume of water lost from the system.

Water flow = Water Intrusion / Absolute test pressure.
